NEW QUESTION: 2

You have configured the DHCP server on a FortiGate's port1 interface (or internal, depending on the model) to offer IPs in a range of 192.168.1.65-192.168.1.253. When the first host sends a DHCP request, what IP will the DHCP offer?

- A. 192.168.1.253
- B. 192.168.1.65
- C. 192.168.1.99
- D. 192.168.1.66

Answer: B

NEW QUESTION: 3

Amazon EC2 instances are provisioned with a default IAM role. Which of the following actions can you perform with this role?

- A. Attach an IAM policy to the role.
- B. Attach an IAM role to the instance.
- C. Attach an IAM policy to the instance.
- D. Attach an IAM role to the instance profile.

Answer: D

Explanation:

By default, connection draining is enabled for Application Load Balancers but must be enabled for Classic Load Balancers. When Connection Draining is enabled and configured, the process of deregistering an instance from an Elastic Load Balancer gains an additional step. For the duration of the configured timeout, the load balancer will allow existing, in-flight requests made to an instance to complete, but it will not send any new requests to the instance. During this time, the API will report the status of the instance as InService, along with a message stating that "Instance deregistration currently in progress." Once the timeout is reached, any remaining connections will be forcibly closed.

<https://docs.aws.amazon.com/autoscaling/ec2/userguide/attach-load-balancer-asg.html>
