NEW QUESTION: 1

A type of organization in which the project manager has little formal authority and basically acts as a staff assistant to an executive who is ultimately responsible for the project is called:

- A. Project expediter
- B. Project coordinator
- C. Functional
- D. Weak matrix

Answer: A

NEW QUESTION: 2

You've identified a risk event on your current project that could save \$500,000 in project costs if it occurs. Your

organization is considering hiring a consulting firm to help establish proper project management techniques in order to assure it realizes these savings. Which of the following is true based on this statement? (Choose the best answer.)

- A. This risk event should be mitigated to take advantage of the savings.
- B. This is a risk event that should be accepted, because the rewards outweigh the threat to the project.
- C. This risk event is an opportunity to the project and should be exploited.
- D. This a risk event that should be shared to take full advantage of the potential savings.

Answer: D

Explanation:

This risk event has the potential to save money on project costs. Sharing involves using a third party to help assure that the opportunity take place.

NEW QUESTION: 3

Which technology can be used to secure the core of an STP domain?

- A. UplinkFast
- B. BPDU filter
- C. root guard
- D. BPDU guard

Answer: C

Explanation:

Since STP does not implement any authentication or encryption to protect the exchange of BPDUs, it is vulnerable to unauthorized participation and attacks. Cisco IOS offers the STP Root Guard feature to enforce the placement of the root bridge and secure the core of the STP domain.

STP root guard forces a port to become a designated port so that no switch on the other end of the link can become a root switch. If a port configured for root guard receives a superior BPDU, the port it is received on is blocked. In this way, STP root guard blocks other devices from trying to become the root bridge.

STP root guard should be enabled on all ports that will never connect to a root bridge, for example, all end user ports. This ensures that a root bridge will never be negotiated on those ports.
