- C. created

D. activated

Answer: A

NEW QUESTION: 2

To complete the sentence, select the appropriate option in the answer area.

Answer:

Explanation:

Explanation

Box 1: simple lookups

A key/value store associates each data value with a unique key. Most key/value stores only support simple query, insert, and delete operations. To modify a value (either partially or completely), an application must overwrite the existing data for the entire value. In most implementations, reading or writing a single value is an atomic operation.

An application can store arbitrary data as a set of values. Any schema information must be provided by the application. The key/value store simply retrieves or stores the value by key.
