You have a Microsoft Exchange Server 2019 organization that contains 200 mailboxes.

You need to add a second email address to each mailbox. The address must have a syntax that uses the first letter of each user's last name, followed by the user's first name, and then @fabrikam.com.

Solution: You convert all the mailboxes to shared mailboxes, and then you run the Set-Mailbox cmdlet and specify the -EmailAddressPolicyEnabled \$false parameter.

Does this meet the goal?

- A. Yes
- B. No

**Answer: B**

Explanation:

Reference:

<https://docs.microsoft.com/en-us/exchange/email-addresses-and-address-books/email-address-policies/email-address-policies> Email address policies define the rules that create email addresses for recipients in your Exchange organization.

The basic components of an email address policy are:

**Email address templates:** Define the email address format for the recipients (for example

<firstname>@contoso.com or

<lastname>.<firstname>@contoso.com).

**Recipient filter:** Specifies the recipients whose email addresses are configured by the policy.

**Priority:** Specifies the order to apply the email address policies (important if a recipient is identified by more than one policy).

The `EmailAddressPolicyEnabled` parameter specifies whether to apply email address policies to this recipient.

Valid values are:

`$true`: Email address policies are applied to this recipient. This is the default value.

`$false`: Email address policies aren't applied to this recipient.
