Explanation:

The company identifies the following virtualization requirements:

Minimize the number of permissions and privileges assigned to users

Ensure that the members of a group named Group2 can add a WSUS server to the fabric Ensure that a diagram view of the virtualization environment can be generated dynamically

Minimize the amount of administrative effort required to manage the virtualization environment Prevent the failure of a

front-end web server from affecting the availability of the CRM application Ensure that the members of a group named Group1 can

create new virtual machines in the Los Angeles office only Only create virtual machine templates by using objects that already

exist in the System Center 2012 Virtual Machine Manager (VMM) library On the failover cluster in the main office, apply

limited distribution release (LDR) updates to the virtualization hosts without disrupting the virtual machines

hosted on the virtualization hosts Cluster-Aware Updating Overview This topic provides an overview of Cluster-Aware

Updating (CAU), a new feature for failover clusters in Windows Server 2012 that automates the software updating process on

clustered servers while maintaining availability. It describes scenarios and applications for using CAU, and

provides links to content that details how to integrate CAU into other IT automation and management processes.
