**NEW QUESTION: 1**

Note: This question is part of a series of questions that use the same scenario. For your convenience, the scenario is repeated in each question. Each question presents a different goal and answer choices, but the text of the scenario is exactly the same in each question in this series.

Your network contains a single Active Directory domain named adatum.com.

The network contains five servers configured as shown in the following table:

All of the servers run Windows Server 2012 R2.

Test\_Server has a shared folder named ShareA. Only local users have permissions to ShareA.

The network contains a mainframe computer that is administered by using the Telnet protocol.

The domain contains four client computers configured as shown in the following table:

All of the client computers run the 64-bit version of Windows 10. User3 frequently accesses ShareA.

Remote Desktop is enabled on Computer4.

Your company identifies the following requirements:

Ensure that you can test unsigned device drivers on Computer1.

Enable Credential Guard on Computer2.

Run commands and cmdlets remotely on Computer2.

Configure User Account Control (UAC) on Computer3 to prompt administrators for credentials when

elevated privileges are required.

Ensure that User1 can view and interact with a desktop session of User3.

Ensure that User2 can use Telnet to manage the mainframe.

Ensure that User4 can use Remote Desktop to access Computer4 remotely.

On Test\_Server, you reset the password for User3.

You need to ensure that User3 can access ShareA.

Which tool should you instruct User3 to use on Computer3?

- A. Credential Manager
- B. Authorization Manager
- C. Active Directory Users and Computers
