- C. Value dating
- D. Wire charges

**Answer: C**

**NEW QUESTION: 3**

The boot volume on your Oracle Linux instance has run out of space. Your application has crashed due to a lack of swap space, forcing you to increase the size of the boot volume. Which step should NOT be included in the process used to solve the issue?

- A. Reattach the boot volume and restart the instance.
- B. Attach the resized boot volume to a second instance as a data volume; extend the partition and grow the file system on the resized boot volume.
- C. Stop the instance and detach the boot volume.
- D. Resize the boot volume by specifying a larger value than the boot volume's current size.
- E. Create a RAID 0 configuration to extend the boot volume file system onto another block volume.

**Answer: E**

Explanation:

Explanation

The Oracle Cloud Infrastructure Block Volume service lets you expand the size of block volumes and boot volumes. You have three options to increase the size of your volumes:

- Expand an existing volume in place with offline resizing. See Resizing a Volume Using the Console for the steps to do this.
- Restore from a volume backup to a larger volume. See Restoring a Backup to a New Volume and Restoring a Boot Volume.
- Clone an existing volume to a new, larger volume. See Cloning a Volume and Cloning a Boot Volume.

**NEW QUESTION: 4**

In IPv6 what is the major difference concerning application layer vulnerabilities compared to IPv4?

- A. Vulnerabilities in the application layer are greatly different from IPv4.
- B. Due to the extensive security measures built in IPv6,

application layer vulnerabilities need not be addresses.

**C.** Vulnerabilities in the application layer are independent of the network layer. Attacks and mitigation techniques are almost identical.

**D.** Implementing IPv4 security in a dual-stack network offers protection from IPv6 attacks too.

**Answer: C**
