NEW QUESTION: 1

Your network contains an Active Directory domain named contoso.com. The domain contains a server named Server1. Server1 runs Windows Server 2012.

On Server1, you create a printer named Printer1. You share Printer1 and publish Printer1 in Active Directory.

You need to provide a group named Group1 with the ability to manage Printer1. What should you do?

- A.** From Active Directory Users and Computers, configure the Security settings of Server1Printer1.
- B.** From Print Management, configure the Sharing settings of Printer1.
- C.** From Print Management, configure the Security settings of Printer1.
- D.** From Print Management, configure the Advanced settings of Printer1.

Answer: C

Explanation:

Set permissions for print servers

Open Print Management.

In the left pane, click Print Servers, right-click the applicable print server and then click Properties.

On the Security tab, under Group or users names, click a user or group for which

you want to set permissions.

Under Permissions for <user or group name>, select the Allow or Deny check boxes

for the permissions listed as needed.

To edit Special permissions, click Advanced.

On the Permissionstab, click a user group, and then click Edit.

In the Permission Entry dialog box, select the Allow or Deny check boxes for the permissions that you want to edit.

Reference: Set Permissions for Print Servers

NEW QUESTION: 2

Refer to the exhibit.

Based on this FIB table, which statement is correct?

A. The IP address of the router on FastEthernet is 209.168.201.1.

B. There is no default gateway.

C. The gateway of last resort is 192.168.201.1.

D. The router will listen for all multicast traffic.

Answer: C

Explanation:

Explanation/Reference:

Explanation:

The 0.0.0.0/0 route is the default route and is listed as the first CEF entry. Here we see the next hop for this default route lists 192.168.201.1 as the default router (gateway of last resort).

NEW QUESTION: 3

A single HP VAN SDN Controller is used to control

OpenFlow-enabled switches that operate in virtualization mode.

An internal application is installed on the controller that

redirects classified traffic to a specific VLAN. The connection

between the controller and the network is lost. The HP

OpenFlow-enabled switches' connection interruption mode is set to standalone mode.

What is the forwarding behavior of the OpenFlow-enabled switches?

- A. Based on the timeout values, the flow entries age out and only OpenFlow traffic is discarded.
- B. Based on the timeout values, the flow entries are removed from the flow tables, and all traffic is discarded on the switches.
- C. All flow entries are set not to age out and the classified traffic is still redirected.
- D. All flow entries are removed, and traffic is forwarded using normal switch processing.

Answer: D
