NEW QUESTION: 1

You plan to monitor storage servers after configuring an I/O resource manager plan with directives for inter-database plans and intra-database plans.

Which two types of metrics would help assess the impact of the intra-database plans on I/O to the storage servers?

- A. Resource Consumer Group I/O
- B. Database I/O
- C. Category I/O
- D. Smart Flash Log I/O
- E. Smart Flash Cache I/O

Answer: A,B

Explanation:

B: Database metrics provide information about the size of the I/O load from each database specified in the interdatabase plan.

C: Consumer group metrics provide information about the size of the I/O load from each consumer group specified in a database resource plan. Each database in the interdatabase plan has metrics for each of its consumer groups.

Note:

* I/O Resource Manager (IORM) Settings

Incorrect:

Not A: Category metrics provide information about the size of the I/O load from each category specified in the current IORM category plan.

NEW QUESTION: 2

You administer a Microsoft SQL Server 2012 database.

The database contains a schema named CUSTOMER. CUSTOMER contains several tables and views with sensitive data, as well as various stored procedures and functions.

In order to configure security for CUSTOMER, you need to determine how to meet the security requirements listed in the answer area.

Which command or commands should you use? (To answer, drag the appropriate command or commands to their corresponding security requirement or requirements in the answer area. Answer choices may be used once, more than once, or not at all. Answer targets may be used once or not at all. NEW QUESTION: 3

An IBM technical specialist has positioned the IBM FlashSystem V9000 storage solution to meet a customer's requirement for a storage solution to host high IOPS with low latency workloads. The IBM

FlashSystem V9000 uses an IBM patented Variable Stripe RAID with two dimensional Flash RAID technology.

Which statements describe these features?

- A.** The Variable Stripe Array function stripes data across DIMM memory within a Microlatency Module.
- Two Dimensional Flash RAID function provides protection for the Microlatency Modules.
- B.** The Variable Stripe Array function stripes data across its

set of chips within a Microlatency Module.

Two Dimensional Flash RAID function provides protection for the Microlatency Modules.

C. The Variable Stripe Array function stripes data across all the installed Microlatency Modules. Two Dimensional Flash RAID function provides protection across DIMM memory within a Microlatency Module.

D. The Variable Stripe Array function stripes data across its set of chips within a Microlatency Module. Two Dimensional Flash RAID function provides cluster protection between two installed FlashSystem V9000 systems.

Answer: B

Explanation:

IBM Variable Stripe RAID is a patented IBM technology that provides an intra-module RAID stripe on each flash module.

With two-dimensional (2D) Flash RAID, system-wide RAID 5 along with Variable Stripe RAID helps reduce downtime and maintain performance, and enables the provisioning of an entire flash module as a spare to be used in another flash module failure.
