**NEW QUESTION: 3**

Your company's network just finished going through a SAS 70 audit. This audit reported that overall, your network is secure, but there are some areas that needs improvement. The major area was SNMP security. The audit company recommended turning off SNMP, but that is not an option since you have so many remote nodes to keep track of. What step could you take to help secure SNMP on your network?

- A. Block access to UDP port 171
- B. Block all internal MAC address from using SNMP
- C. Change the default community string names
- D. Block access to TCP port 171

**Answer: C**

Explanation:

SNMP Version 1 does not provide encryption, so the community strings are in the clear.

Known community strings, the default of Public and Private, are well known because these are the default community strings that come out of the box. By changing these values to different community string names, guessing the actual names will be difficult.
