

NS0-003 Test Questions | Network Appliance Cost Effective NS0-003 Dumps & Valid NS0-003 Braindumps - Mecatronica

Network Appliance NS0-003 Test Questions And we are consigned as the most responsible company in this area, We'll explain all relative things about the NS0-003 exam study torrent and any other exam study material to ensure you are able to have better understand of our exam training pdf, By this high efficient reviewing NS0-003 verified study torrent, candidates will benefit a lot in short term and pass exam quickly, Also, by studying hard, passing a qualifying examination and obtaining a Network Appliance NS0-003 Cost Effective Dumps certificate is no longer a dream.

Our NS0-003 study materials are designed carefully, The issues were handled expeditiously and soon dissipated, In this lesson, you learn how to set up time services using chrony and timedatectl.

They had the `each` iterator, which iterated by lines, historically confusing **NS0-003 Test Questions** some people, Do you need to negotiate or sell more effectively, This book uses real world examples to give you a context in which to perform a task.

Introduction to the Border Gateway Patrol, Mapping the Layout, So I built these [NS0-003](#) big class libraries and I had all this reusable code, Creating Great Shots, And we are consigned as the most responsible company in this area.

We'll explain all relative things about the NS0-003 exam study torrent and any other exam study material to ensure you are able to have better understand of our exam training pdf.

NS0-003 Exam tool - NS0-003 Test Torrent & NetApp Certified Technology Associate study materials

By this high efficient reviewing NS0-003 verified study torrent, candidates will benefit a lot in short term and pass exam quickly, Also, by studying hard, passing a [NetApp Certified Technology Associate](#) qualifying examination and obtaining a Network Appliance certificate is no longer a dream.

You need the help of our NS0-003 latest dumps, Try downloading the free demo of exam questions to check the accuracy of our questions and answers before payment.

Our Network Appliance NetApp Certified Technology Associate exam prep torrents are your first step to the success, Network Appliance NS0-003 App online version- Be suitable to all kinds of equipment or digital devices.

There is an irreplaceable trend that an increasingly amount of

clients are picking up NS0-003 practice materials from tremendous practice materials in the market.

We build good relationship with a group of customers, many of them will become regular customer after passing NS0-003 exam, they not only give us great comments, but purchase the second or more times later with confidence toward our products, and recommend our NS0-003 test prep materials to people around them who need the exam preparation materials.

Free PDF 2021 Network Appliance NS0-003: NetApp Certified Technology Associate Latest Test Questions

Our NS0-003 exam braindumps offer you a wide and full coverage of the keypoints on the career-oriented certification and help you pass the exam without facing any difficulty.

You cannot lag behind and with our NS0-003 preparation materials, and your goals will be easier to fix, Once we have developed the latest version of NS0-003 training torrent, our system will automatically send you the installation package.

You can download on one part of questions and answers of the Network Appliance NS0-003 exam materials, If you just need the real questions and answers, this one will be your best choice.

You may be still hesitating about if you should purchase NS0-003 braindumps pdf or NS0-003 exam cram, It was easy to move on and advance through the material. I was able to get a great IT job Chris.

IT certification is widely universal in most [Valid CCAK Braindumps](#) countries in the world, There are countless cheap options available out there but, our NS0-003 exam braindumps will provide you everything you need to prepare for NS0-003 exam and pass it in the first attempt.

The frequent updates feature, ensure that the [C THR96 2005 Test Torrent](#) candidates' knowledge is up to date and they can prepare for an exam anytime they want, this updated NCSA-HC training material [Cost Effective F3 Dumps](#) feature is the biggest cause of the success of our candidates in NCSA-HC.

NEW QUESTION: 1

Note: This question is part of a series of questions that use the same scenario. For your convenience, the scenario is repeated in each question. Each question presents a different goal and answer choices, but the text of the scenario is exactly the same in each question in this series.

You are a database administrator for a company that has an on-premises Microsoft SQL Server environment and Microsoft Azure SQL Database instances. The environment hosts several customer databases, and each customer uses a dedicated

instance. The environments that you manage are shown in the following table.

You need to configure the Contoso instance.

How should you complete the Transact-SQL statement? To answer, select the appropriate Transact-SQL segments in the answer area.

Answer:

Explanation:

Explanation

Box 1: show advanced options

Advanced configuration options are displayed by first setting show advanced option to 1.

Box 2: max worker threads

SQL Server uses the native thread services of the operating systems so that one or more threads support each network that SQL Server supports simultaneously, another thread handles database checkpoints, and a pool of threads handles all users. The default value for max worker threads is 0. This enables SQL Server to automatically configure the number of worker threads at startup. The default setting is best for most systems.

References:

<https://docs.microsoft.com/en-us/sql/database-engine/configure-windows/configure-the-max-worker-threads-serv>

NEW QUESTION: 2

From a business perspective, which of the following is the MOST important objective of a disaster recovery test?

- A. Errors are discovered in the disaster recovery process.
- B. All critical data is recovered within recovery time objectives (RTOs).
- C. The organization gains assurance it can recover from a disaster
- D. All business critical systems are successfully tested.

Answer: A

NEW QUESTION: 3

A vSphere Administrator just finished installing new software on the Windows vCenter Server and notices that vCenter Server services no longer start properly.

What two tasks should be done next? (Choose two.)

- A. Check the vCenter Server logs.
- B. Check for network port conflicts.
- C. Reinstall vCenter Server.
- D. Contact the server hardware manufacturer.

Answer: A,B

NEW QUESTION: 4

SIMULATION

Scenario:

You work for SWITCH.com. They have just added a new switch (SwitchB) to the existing network as shown in the topology diagram.

RouterA is currently configured correctly and is providing the routing function for devices on SwitchA and SwitchB. SwitchA is currently configured correctly, but will need to be modified to support the addition of SwitchB. SwitchB has a minimal configuration. You have been tasked with completing the needed configuring of SwitchA and SwitchB. SwitchA and SwitchB use Cisco as the enable password.

All commands must be entered at the physical interface level. Configuration Requirements for SwitchA

The VTP and STP configuration models on Switch A should not be modified.

SwitchA needs to be the root switch for vlans 11, 12, 13, 21, 22, and 23. All other vlans should be left at

their default values.

Configuration Requirements for SwitchB

Vlan21

- Name: Marketing

- will support two servers attached to fa0/9 and fa0/10

Vlan22

- Name: Sales

- will support two servers attached to fa0/13 and fa0/14

Vlan23

- Name: Engineering

- will support two servers attached to fa0/15 and fa0/16

Access ports that connect to server should transition immediately to forwarding state upon detecting the

connection of a device

SwitchB VTP mode needs to be the same as SwitchA.

SwitchB must operate in the same spanning tree mode as SwitchA.

No routing is to be configured on SwitchB.

Only the SVI Vlan 1 is to be configured and it is to use address 192.168.1.11/24.

Inter-switch Connectivity Configuration Requirements

For operational and security reasons trunking should be unconditional and Vlans 1, 21, 22 and 23

should be tagged when traversing the trunk link.

The two trunks between SwitchA and SwitchB need to be configured in a mode that allows for the

maximum use of their bandwidth for all vlans. This mode should be done with a non-proprietary protocol, with SwitchA controlling activation.

Propagation of unnecessary broadcasts should be limited using manual pruning on this trunk link.

Answer:

Explanation:

Here are steps

Explanation/Reference:

Initial Configuration (some lines have been removed)

Solution

SW-A (close to router)

Note: If Sw-A does not have Vlan 11, 12, 13 we have to create them first with command "SW-A(config)

```
#vlan 11,12,13"
```

```
SW-A(config)#spanning-tree vlan 11-13,21-23 root primary
```

```
SW-A(config)#vlan 21
```

```
SW-A(config-vlan)#name Marketing
```

```
SW-A(config-vlan)#exit
```

```
SW-A(config)#vlan 22
```

```
SW-A(config-vlan)#name Sales
```

```
SW-A(config-vlan)#exit
```

```
SW-A(config)#vlan 23
```

```
SW-A(config-vlan)#name Engineering
```

```
SW-A(config-vlan)#exit
```

```
SW-A(config)#interface range fa0/3 - 4
```

```
SW-A(config-if-range)#no switchport mode access
```

```
SW-A(config-if-range)#no switchport access vlan 98 (These two commands must be deleted to form a trunking link)
```

```
SW-A(config-if-range)#channel-group 1 mode active
```

```
SW-A(config-if-range)#channel-protocol lacp
```

```
SW-A(config-if-range)#no shutdown
```

```
SW-A(config-if)#interface port-channel 1
```

```
SW-A(config-if)#switchport mode trunk
```

```
SW-A(config-if)#switchport trunk native vlan 99 //this command will prevent the "Native VLAN mismatched" error on both switches
```

```
SW-A(config-if)#switchport trunk allowed vlan 1,21-23
```

```
SW-A(config-if)#no shut
```

Note: When you apply commands under "interface port-channel 1", the same commands will be automatically applied to the physical member interfaces (of port-channel 1) so you don't need to type them under physical member interfaces again.

SW-B (far from router)

```
SW-B(config)#vlan 21
SW-B(config-vlan)#name Marketing
SW-B(config-vlan)#exit
SW-B(config)#vlan 22
SW-B(config-vlan)#name Sales
SW-B(config-vlan)#exit
SW-B(config)#vlan 23
SW-B(config-vlan)#name Engineering
SW-B(config-vlan)#exit
SW-B(config)#vlan 99
SW-B(config-vlan)#name TrunkNative // not necessary to name it
but just name it same as SwitchA SW-B(config-vlan)#exit
SW-B(config)#interface range fa0/9 - 10
SW-B(config-if-range)#switchport mode access
SW-B(config-if-range)#switchport access vlan 21
SW-B(config-if-range)#spanning-tree portfast
SW-B(config-if-range)#no shutdown
SW-B(config-if-range)#exit
SW-B(config)#interface range fa0/13 - 14
SW-B(config-if-range)#switchport mode access
SW-B(config-if-range)#switchport access vlan 22
SW-B(config-if-range)#spanning-tree portfast
SW-B(config-if-range)#no shutdown
SW-B(config-if-range)#exit
SW-B(config)#interface range fa0/15 - 16
SW-B(config-if-range)#switchport mode access
SW-B(config-if-range)#switchport access vlan 23
SW-B(config-if-range)#spanning-tree portfast
SW-B(config-if-range)#no shutdown
SW-B(config-if-range)#exit
SW-B(config)#vtp mode transparent
SW-B(config)#spanning-tree mode rapid-pvst //Same as Sw-A
SW-B(config)#ip default-gateway 192.168.1.1 (you can get this
IP from SW-A with command show cdp neighbour detail)
SW-B(config)#interface vlan 1
SW-B(config-if)#ip address 192.168.1.11 255.255.255.0
SW-B(config-if)#no shutdown
SW-B(config-if)#exit
SW-B(config)#interface range fa0/3 - 4
SW-B(config-if-range)#channel-group 1 mode passive //mode
passive because "SwitchA controlling activation"
SW-B(config-if-range)#channel-protocol lacp
SW-B(config-if-range)#no shutdown
SW-B(config-if)#interface port-channel 1
SW-B(config-if)#switchport trunk encapsulation dot1q
SW-B(config-if)#switchport mode trunk
SW-B(config-if)#switchport trunk native vlan 99 //this command
will prevent the "Native VLAN mismatched" error on both
switches
SW-B(config-if)#switchport trunk allowed vlan 1,21-23
SW-B(config-if)#no shut
Note: For Sw-B we have to set the 802.1q trunking protocol
(swswitchport trunk encapsulation dot1q) before converting it
```

into a trunk because it is a 3500 series (or higher) switch which supports both ISL and 802.1Q and we have to explicitly set which trunking protocol to be used. Sw-A is a 2900x series (or lower) switch and does not support ISL trunking protocol (802.1Q is the only supported trunking protocol) so we can apply "switchport mode trunk" directly.

Some guidelines for configuring SwitchA & SwitchB:
Configuration Requirements for SwitchA

Configuration Requirements for SwitchB

Inter-switch Connectivity Configuration Requirements:

Some notes for this sim:

- + You should check the initial status of both switches with these commands: show vtp status (transparent mode on switchA and we have to set the same mode on switchB), show spanning-tree [summary] (rapid-pvst mode on switchA and we have to set the same mode on switchB), show vlan (check the native vlan and the existence of vlan99), show etherchannel 1 port-channel and show ip int brief (check if Port-channel 1 has been created and make sure it is up), show run (to check everything again).
- + When using "int range f0/x - y" command hit space bar before and after "-" otherwise the simulator does not accept it.
- + You must create vlan 99 for the switchB. SwitchA already have vlan 99 configured.
- + At the end, you can try to ping from SwitchB to RouterA (you can get the IP on RouterA via the show cdp neighbors detail on SwitchA), not sure if it can ping or not. If not, you can use the "ip default-gateway 192.168.1.1" on SwitchB.
- + The name of SwitchA and SwitchB can be swapped or changed so be careful to put your configuration into appropriate switch.
