So it is really a wise action to choose our products, Our NSE6_FWB-6.1 verified study torrent is very comprehensive and includes the latest exam content, NSE6_FWB-6.1 will be a better decision for you to realize the above wishes.

The statistics report function helps the learners find the weak links and [Test PDMM Practice](#) improve them accordingly, After you pay we will send you download links, account and password of Fortinet exam dump materials in a minute.

You who have had the NSE6_FWB-6.1 reliable study material already will receive the latest news of the training study material, Most questions and dumps of our NSE6_FWB-6.1 test dumps are valid and accurate.

We have tested the new version for many times, With our NSE6_FWB-6.1 training guide, you are acknowledged in your profession, Our company has established a long-term partnership with those who have purchased our NSE6_FWB-6.1 actual exam questions.

NEW QUESTION: 1

Refer to the exhibit.

Based on the Authentication sources configuration shown, which statement accurately describes the outcome if the user is not found?

- A.** If the user is not found in the local user repository a reject message is sent back to the NAD.
- B.** If the user is not found in the remotelab AD but is present in the local user repository, a reject message is sent back to the NAD.
- C.** If the user is not found in the local user repository a

timeout message is sent back to the NAD.

D. If the user is not found in the local user repository but is present in the remotelab AD, a reject message is sent back to the NAD.

E. If the user is not found in the local user repository and remotelab AD, a reject message is sent back to the NAD.

Answer: E

Explanation:

Explanation

Policy Manager looks for the device or user by executing the first filter associated with the authentication source.

After the device or user is found, Policy Manager then authenticates this entity against this authentication source.

The flow is outlined below:

* On successful authentication, Policy Manager moves on to the next stage of policy evaluation, which collects role mapping attributes from the authorization sources.

* Where no authentication source is specified (for example, for unmanageable devices), Policy Manager passes the request to the next configured policy component for this service.

* If Policy Manager does not find the connecting entity in any of the configured authentication sources, it rejects the request.
