#### **NEW QUESTION: 1**

Which of the following describes a risk and mitigation associated with cloud data storage?

**A.** Risk: Shared hardware caused data leakage

Mitigation: Strong encryption at rest

**B.** Risk: Data loss from de-duplication

Mitigation: Dynamic host bus addressing

**C.** Risk: Combined data archiving

Mitigation: Two-factor administrator authentication

**D.** Risk: Offsite replication

Mitigation: Multi-site backups

#### **Answer: A**

Explanation:

With cloud data storage, the storage provider will have large enterprise SANs providing large pools of storage capacity. Portions of the storage pools are assigned to customers. The risk is that multiple customers are storing their data on the same physical hardware storage devices. This presents a risk

(usually a very small risk, but a risk all the same) of other customers using the same cloud storage hardware being able to view your data.

The mitigation of the risk is to encrypt your data stored on the SAN. Then the data would be unreadable even if another customer was able to access it.

**NEW QUESTION: 2**

Which two options can be specified in order to access a system-period temporal table for a specific point in time guaranteeing accurate results?

- A. A SELECT statement predicate against the transaction start ID of the base table.
- B. A period-specification placed in the WHERE clause of a subselect
- C. A period-specification placed in the FROM clause of a subselect.
- D. A predicate against the start and end columns of the base table placed in the WHERE clause of a subselect.
- E. A SET of the CURRENT TEMPORAL SYSTEM\_TIME special register to a non-null value prior to a SELECT against the temporal table.

**Answer: A,E**

**NEW QUESTION: 3**
