NEW QUESTION: 1

- A. Option D
- B. Option B
- C. Option E
- D. Option C
- E. Option A

Answer: A,B,E

Explanation:

Grid spread allocates data across the cells on the webform and runs on the client browser. Mass allocate triggers a calc script

which can allocate data beyond cells those are available in the form.

If your administrator has enabled Grid Spread as a data form property, you can specify an amount or percentage by which Planning increases or decreases values across multiple dimensions on the data form, based on the existing values in the target cells. You immediately see the result in the data form and can save the new data or discard it. When calculating the spread data, Planning ignores read-only and locked cells and cells having supporting detail. Data integrity is ensured by spreading values only to cells to which you have access. If you have the Mass Allocate role (assigned in Oracle's [\[email#160;protected\]](#) Shared Services) and an administrator has enabled Mass Allocate as the data form property, you can spread data using the powerful feature, Mass Allocate, which:

NEW QUESTION: 2

You would like a way to quickly and fairly determine which solution is the best choice for your organization. Which of the following approaches would allow you to determine the top-rated solutions for your organization?

- A. Scoring system
- B. Acceptance and evaluation criteria
- C. Vendor assessment
- D. Voting system

Answer: A

NEW QUESTION: 4

What is a system that is intended or designed to be broken into by an attacker?

- A. Honeybucket
- B. Spoofing system
- C. Honeypot
- D. Decoy

Answer: C

Explanation:

A honeypot is a system whose purpose it is to be attacked. An administrator can watch and study the attack to research current attack methodologies.

According to the Wepopedia.com, a Honeypot luring a hacker into a system has several main purposes:

The administrator can watch the hacker exploit the vulnerabilities of the system, thereby learning where the system has weaknesses that need to be redesigned.

The hacker can be caught and stopped while trying to obtain root access to the system.

By studying the activities of hackers, designers can better create more secure systems that are potentially invulnerable to future hackers.

There are two main types of honeypots:

Production - A production honeypot is one used within an organization's environment to help mitigate risk.

Research - A research honeypot add value to research in computer security by providing a platform to study the threat.

Incorrect Answers:

B. A honey bucket is not an IT term. It's a term for a waterless toilet. A honeypot is a system designed to be attacked.

C. A honeypot could be described as a decoy. It is a system often imitating another system but designed to be attacked. However, a honeypot is the specific name for a system designed to be attacked.

D. Spoofing system is not the correct term for a system that is designed to be attacked. A honeypot could be described as a spoofing system in that a honeypot often imitates another system. However, a honeypot is the specific name for a system designed to be attacked.
