Answer: A

NEW QUESTION: 2

When a change request is received, the business analyst is responsible for:

- A. ensuring that change-related incidents are minimized in production.
- B. analyzing the impact to the project schedule and budget.
- C. prioritizing and scheduling the changes requested.
- D. analyzing the impact on business and underlying systems.

Answer: D

NEW QUESTION: 3

Azure Resource Manager

allows you to manage Azure resources in a declarative manner. It provides a central location for defining and managing the infrastructure for your Azure environment. It also provides a consistent way to manage your Azure resources across different regions and subscriptions.

When you create a resource group, you specify a location for the resource group. This location is the region where the resources in the resource group will be deployed. The location is also the region where the resource group's management operations will be performed.

When you create a resource, you specify a location for the resource. This location is the region where the resource will be deployed. The location is also the region where the resource's management operations will be performed.

When you create a resource, you specify a location for the resource. This location is the region where the resource will be deployed. The location is also the region where the resource's management operations will be performed.

When you create a resource group, you specify a location for the resource group. This location is the region where the resources in the resource group will be deployed.

- A. platformFaultDomainCount is 3
- B. platformFaultDomainCount is 0
- C. platformUpdateDomainCount is 50
- D. platformUpdateDomainCount is 20
- E. platformUpdateDomainCount is 25
- F. platformFaultDomainCount is 4
- G. platformUpdateDomainCount is 10
- H. platformFaultDomainCount is 2
- I. platformUpdateDomainCount is 40
- J. platformFaultDomainCount is 1
- K. platformUpdateDomainCount is 30

Answer: D, H

Explanation:

Explanation

Use two fault domains.

2 or 3 is max, depending on which region you are in.

Use 20 for platformUpdateDomainCount

Increasing the update domain (platformUpdateDomainCount) helps with capacity and availability planning when the platform reboots nodes. A higher number for the pool (20 is max) means that fewer of their nodes in any given availability set would

be rebooted at once.
