Deploying Certificate Templates

After creating a new certificate template, the next step is to deploy the certificate template so that a certification authority (CA) can issue certificates based on it. Deployment includes publishing the certificate template to one or more CAs, defining which security principals have Enroll permissions for the certificate template, and deciding whether to configure autoenrollment for the certificate template.

To define permissions to allow a specific security principal to enroll for certificates based on a certificate template

1. Open the Certificate Templates snap-in (Certtmpl.msc).

2. In the details pane, right-click the certificate template you want to change, and then click Properties.

3. On the Security tab, ensure that Authenticated users is assigned Read permissions. This ensures that all authenticated users on the network can see the certificate templates.

4. On the Security tab, click Add. Add a global group or universal group that contains all security principals requiring Enroll permissions for the certificate template, and then click OK.

5. On the Security tab, select the newly added security group, and then assign Allow for the Read and Enroll permissions.

6. Click OK.

Permission Design

Use the following recommendations for permissions assignments:

Assign permissions only to global groups or to universal groups. It is not recommended to assign permissions to domain local groups. Domain local groups are only recognized in the domain where they exist, and assigning permissions to them can result in inconsistent application of permissions. You should not assign permissions directly to an individual user or computer account. (...)
