NEW QUESTION: 1

NOTE: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

A customer needs to start a new agreement by making only an annual Monetary Commitment of \$25,000 US dollars for Microsoft Azure services.

Solution: The customer uses the Select Plus agreement to purchase the services.

Does this meet the goal?

A. Yes

B. No

Answer: B

Explanation:

Explanation

NEW QUESTION: 2

Which of the following is a rating method of performance appraisal?

A. field appraisal

B. checklist

C. essay

D. critical incident review

Answer: B

Explanation:

Explanation: A checklist is a rating method of performance appraisal. In a checklist system, the various elements of the job description are listed, and the employee receives a check mark for each element he performs with competence. This is considered a rating system because the number of checks can be converted into a score, which makes it possible to compare employees. In a field appraisal, someone besides the employee's supervisor observes and reports on the employee's performance. In an essay appraisal, the evaluator writes a short prose passage about the employee's performance. In a critical incident review, the supervisor discusses the especially positive and negative aspects of the employee's performance.

NEW QUESTION: 3

In order to exploit some new storage tiers that have been provisioned by a storage administrator, the partitions of a large heap table must be moved to other tablespaces in your Oracle 12c database?

Both local and global partitioned B-tree Indexes are defined on the table.

A high volume of transactions access the table during the day and a medium volume of transactions access it at night and during weekends.

Minimal disruption to availability is required.

Which three statements are true about this requirement? (Choose three.)

A. The partitions can be moved online to new tablespaces.

B. The partitions can be compressed in the new tablespaces.

C. Global indexes must be rebuilt manually after moving the partitions.

D. Local indexes must be rebuilt manually after moving the

partitions.

E. The partitions can be compressed in the same tablespaces.

Answer: A,B,E

Explanation:

Explanation/Reference:

Explanation:

A: You can create and rebuild indexes online. Therefore, you can update base tables at the same time you are building or rebuilding indexes on that table. You can perform DML operations while the index build is taking place, but DDL operations are not allowed. Parallel execution is not supported when creating or rebuilding an index online.

D: Moving (Rebuilding) Index-Organized Tables Because index-organized tables are primarily stored in a B-tree index, you can encounter fragmentation as a consequence of incremental updates. However, you can use the ALTER TABLE...MOVE statement to rebuild the index and reduce this fragmentation.

C: If a table can be compressed in the new tablespace, also it can be compressed in the same tablespace.

Incorrect Answers:

B, E: Local and Global indexes can be automatically rebuild with UPDATE INDEXES when you move the table.
