**NEW QUESTION: 1**

An organization has added 3 of his AWS accounts to consolidated billing. One of the AWS accounts has purchased a Reserved Instance (RI) of a small instance size in the US-East-1a zone. All other AWS accounts are running instances of a small size in the same zone. What will happen in this case for the RI pricing?

- A.** If there are more than one instances of a small size running across multiple accounts in the same zone no one will get the benefit of RI
- B.** Only the account that has purchased the RI will get the advantage of RI pricing
- C.** Any single instance from all the three accounts can get the benefit of AWS RI pricing if they are running in the same zone and are of the same size
- D.** One instance of a small size and running in the US-East-1a zone of each AWS account will get the benefit of RI pricing

**Answer: C**

Explanation:

Explanation

AWS consolidated billing enables the organization to consolidate payments for multiple Amazon Web Services (AWS) accounts within a single organization by making a single paying account. For billing purposes, consolidated billing treats all the accounts on the consolidated bill as one account. This means that all accounts on a consolidated bill can receive the hourly cost benefit of the Amazon EC2 Reserved Instances purchased by any other account. In this case only one Reserved Instance has been purchased by one account.

Thus, only a single instance from any of the accounts will get the advantage of RI. AWS will implement the blended rate for each instance if more than one instance is running concurrently.

**NEW QUESTION: 2**

You have an Azure data solution that contains an Azure SQL data warehouse named DW1.

Several users execute adhoc queries to DW1 concurrently.

You regularly perform automated data loads to DW1.

You need to ensure that the automated data loads have enough memory available to complete quickly and successfully when the adhoc queries run What should you do?

- A.** Assign a larger resource class to the automated data load queries.
- B.** Hash distribute the large fact tables in DW1 before performing the automated data loads.
- C.** Create sampled statistics for every column in each table of DW1.
- D.** Assign a smaller resource class to the automated data load queries.

**Answer: A**

Explanation:

To ensure the loading user has enough memory to achieve maximum compression rates, use loading users that are a member of a medium or large resource class.
