NEW QUESTION: 1

What selling price would the company have to charge for its product in Year 2 to maintain the same contribution margin percentage rate as in Year 1?

- A. US \$6450
- B. US \$7200
- C. US \$6400
- D. US \$6180

Answer: C

Explanation:

The CMR equals unit contribution margin (UCM) divided by unit selling price. The UCM equals the unit selling price minus unit variable cost. The original unit selling price was US \$60 (\$9,000,000 revenue / 150,000 units), and the original unit variable cost was US \$27 [(\$1,800,000 + \$720,000 + \$1,080,000 +

[\$450,000) + 150,000 units]. The original CP1R was therefore US \$.55 [\$60 - \$27) + \$60]. The new unit variable cost was calculated as US \$28.80. Accordingly the unit selling price X) is US \$64.
