Topic 2, Contoso Ltd

This is a case study. Case studies are not timed separately. You can use as much exam time as you would like to complete each case. However, there may be additional case studies and sections on this exam. You must manage your time to ensure that you are able to complete all questions included on this exam in the time provided.

To answer the questions included in a case study, you will need to reference information that is provided in the case study. Case studies might contain exhibits and other resources that provide more information about the scenario that is described in the case study. Each question is independent of the other questions in this case study.

At the end of this case study, a review screen will appear. This screen allows you to review your answers and to make changes before you move to the next section of the exam. After you begin a new section, you cannot return to this section.

To start the case study

To display the first question in this case study, click the button. Use the buttons in the left pane to explore the content of the case study before you answer the questions. Clicking these buttons displays information such as business requirements, existing environment, and problem statements. When you are ready to answer a question, click the Overview button. Contoso, Ltd, is a consulting company that has a main office in Montreal and two branch offices in Seattle and New York. Contoso has the users and computers shown in the following table.

The company has IT, human resources (HR), legal (LEG), marketing (MKG) and finance (FIN) departments.

Contoso uses Microsoft Store for Business and recently purchased a Microsoft 365 subscription.

The company is opening a new branch office in Phoenix. Most of the users in the Phoenix office will work from home.

Existing Environment

The network contains an Active Directory domain named contoso.com that is synced to Microsoft Azure Active Directory (Azure AD).

All member servers run Windows Server 2016. All laptops and desktop computers run Windows 10 Enterprise.

The computers are managed by using Microsoft System Center Configuration Manager. The mobile devices are managed by using Microsoft Intune.

The naming convention for the computers is the department acronym, followed by a hyphen, and then four numbers, for example, FIN-6785. All the computers are joined to the on-premises Active Directory domain.

Each department has an organization unit (OU) that contains a child OU named Computers. Each computer account is in the Computers OU of its respective department.

Intune Configuration

Requirements

Planned Changes

Contoso plans to implement the following changes:

- * Provide new computers to the Phoenix office users. The new computers have Windows 10 Pro preinstalled and were purchased already.
- * Start using a free Microsoft Store for Business app named Appl.
- * Implement co-management for the computers.

Technical Requirements:

Contoso must meet the following technical requirements:

- * Ensure that the users in a group named Group4 can only access Microsoft Exchange Online from devices that are enrolled in Intune.
- * Deploy Windows 10 Enterprise to the computers of the Phoenix office users by using Windows Autopilot.
- * Monitor the computers in the LEG department by using Windows Analytics.
- * Create a provisioning package for new computers in the HR department.
- * Block iOS devices from sending diagnostic and usage telemetry data.
- * Use the principle of least privilege whenever possible.
- * Enable the users in the MKG department to use Appl.
- * Pilot co-management for the IT department.

NEW QUESTION: 2

You have two Azure Active Directory (Azure AD) tenants named contoso.com and fabrikam.com.

You have a Microsoft account that you use to sign in to both tenants.

You need to configure the default sign-in tenant for the Azure portal.

What should you do?

- A.** From Azure Cloud Shell, run
- B.** From Azure Cloud Shell, run
- C.** From the Azure portal, configure the portal settings.
- D.** From the Azure portal, change the directory.

Answer: B

Explanation:

Explanation

The Set-AzureRmContext cmdlet sets authentication information for cmdlets that you run in the current session. The context includes tenant, subscription, and environment information.

<https://docs.microsoft.com/en-us/powershell/module/azurerms/profile/set-azurermscontext>

NEW QUESTION: 3

You have the following code:

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

Answer:

Explanation:

Explanation

Note:

* The System.Runtime.Serialization namespace contains classes that can be used for serializing and deserializing objects. Serialization is the process of converting an object or a graph of objects into a linear sequence of bytes for either storage or transmission to another location. Deserialization is the process of taking in stored information and recreating objects from it.

* EmitDefaultValue

DataMemberAttribute.EmitDefaultValue Property

Gets or sets a value that specifies whether to serialize the default value for a field or property being serialized. true if the default value for a member should be generated in the serialization stream; otherwise, false.

NEW QUESTION: 4

Your company has an Exchange Server 2010 Service Pack (SP1) organization and a hybrid deployment of Office 365. You have two federation servers named Server1 and Server2. You manage Server1 and Server2 by using a user account that is a member of the Domain Admins group. You need to set the authentication method of the federation servers to forms-based authentication. What should you do?

- A. From the AD FS 2.0 Management console, add a relaying party trust.
- B. From the AD FS 2.0 Management console, add a claims provider trust.
- C. Modify the Web.config file in the %systemroot%\inetpub\adsfs\ls directory.
- D. Modify the Global.asax file in the %systemroot%\inetpub\adsfs\ls directory.

Answer: C

Explanation:

To configure a non-default local authentication type, navigate to inetpub\adsfs\ls located in the root folder, Select web.config and Edit in Notepad. The use Ctrl+F to find < localAuthenticationTypes>, Cut your preferred local authentication type (the entire line), and Paste it to the top of the list before saving and closing the web.config file.
