A. `az vm create --resource-group $resourcegroup --name myVM --image Ubuntu1604LTS --disk-encryption-keyvault $keyvault_name`

B. `az vm create --resource-group $resourcegroup --name myVM --image Ubuntu1604LTS --disk-encryption-keyvault $keyvault_name`

C. `az vm create --resource-group $resourcegroup --name myVM --image Ubuntu1604LTS --disk-encryption-keyvault $keyvault_name`

D.

`az vm create --resource-group $resourcegroup --name myVM --image Ubuntu1604LTS --disk-encryption-keyvault $keyvault_name`

Answer: D

NEW QUESTION: 2

You plan to deploy a new application to a Linux virtual machine (VM) that is hosted in Azure.

The entire VM must be secured at rest by using industry-standard encryption technology to address organizational security and compliance requirements.

You need to configure Azure Disk Encryption for the VM.

How should you complete the Azure Cli commands? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer:

Explanation:

Explanation

Box 1: keyvault

Create an Azure Key Vault with `az keyvault create` and enable the Key Vault for use with disk encryption.

Specify a unique Key Vault name for `keyvault_name` as follows:

```
keyvault_name=myvaultname$RANDOM
```

```
az keyvault create \
--name $keyvault_name \
--resource-group $resourcegroup \
--location eastus \
--enabled-for-disk-encryption True
```

Box 2: keyvault key

The Azure platform needs to be granted access to request the cryptographic keys when the VM boots to decrypt the virtual disks. Create a cryptographic key in your Key Vault with `az keyvault key create`. The following example creates a key named `myKey`:

```
az keyvault key create \
--vault-name $keyvault_name \
--name myKey \
--protection software
```

Box 3: vm

Create a VM with `az vm create`. Only certain marketplace images support disk encryption. The following example creates a VM named `myVM` using an Ubuntu 16.04 LTS image:

```
az vm create \
--resource-group $resourcegroup \
--name myVM \
```

```
--image Canonical:UbuntuServer:16.04-LTS:latest \  
--admin-username azureuser \  
--generate-ssh-keys \  
Box 4: vm encryption  
Encrypt your VM with az vm encryption enable:  
az vm encryption enable \  
--resource-group $resourcegroup \  
--name myVM \  
--disk-encryption-keyvault $keyvault_name \  
--key-encryption-key myKey \  
--volume-type all
```

Note: seems to an error in the question. Should have enable instead of create.

Box 5: all

Encrypt both data and operating system.

NEW QUESTION: 3

You are developing two Windows Store apps named CameraApp and PhotoAlbum. The apps must meet the following requirements:

- * CameraApp must have access to images on the local computer on which CameraApp is running.

- * PhotoAlbum must be able to access the images from CameraApp. You need to configure the deployment package settings for both apps to ensure that the requirements are met. What should you do?

A. Add the Pictures Library setting to the list of capabilities for PhotoAlbum, and add the Share Target setting to the list of declarations for PhotoAlbum.

B. Add the ShareTarget setting to the list of declarations for PhotoAlbum, and add the Pictures Library setting to the list of capabilities for CameraApp.

C. Add the Pictures Library setting to the list of declarations for CameraApp, and add the Share Target setting to the list of capabilities for PhotoAlbum.

D. Add the URI of CameraApp to the Content URIs list for PhotoAlbum, and add the URI of PhotoAlbum to the Content URIs list for CameraApp.

Answer: B
