NEW QUESTION: 2

You are called to the scene of pedestrian that's been struck by a car. Upon examination, you notice clear fluid leaking from the patient's ear, that you believe to be cerebral spinal fluid. This tells you the patient may have suffered a:

- A. Basilar skull fracture
- B. Ruptured eardrum
- C. Severe head injury
- D. Cervical spine injury

Answer: C

NEW QUESTION: 3

Oracle Grid Infrastructure for a stand-alone server is installed on your production host before installing the Oracle Database server. The database and listener are configured by using Oracle Restart.

Examine the following command and its output:

What does this imply?

- A. When a database is created by using SQL* Plus, it is automatically added to the Oracle Restart configuration.
- B. When you start an instance on a host with SQL *Plus, dependent listeners and ASM disk groups are automatically started.
- C. When a database instance is started by using the SRVCTL utility and listener startup fails, the instance is still started.
- D. When you create a database service by modifying the SERVICE_NAMES initialization parameter, it is automatically added to the Oracle Restart configuration.

Answer: C

Explanation:

Explanation/Reference:

Explanation:

About Startup Dependencies

Oracle Restart ensures that Oracle components are started in the proper order, in accordance with component dependencies. For example, if database files are stored in Oracle ASM disk groups, then before starting the database instance, Oracle Restart ensures that the Oracle ASM instance is started and the required disk groups are mounted. Likewise, if a component must be shut down, Oracle Restart ensures that dependent components are cleanly shut down first.

Oracle Restart also manages the weak dependency between database instances and the Oracle Net listener (the listener): When a database instance is started, Oracle Restart attempts to start the listener. If the listener startup fails, then the database is still started. If the listener later fails, Oracle Restart does not shut down and restart any database instances.
