Their 5V0-22.21 exam dumps contain latest and verified questions, that will comes in the real exam, You are not sure how to choose it.

NEW QUESTION: 1

The VMkernel discovers LUNs when it boots, and those LUNs are then visible in the VI Client. If changes are made to the LUNs, which of the following would cause you to rescan to see those changes?

- A. Changes in SAN connectivity or other aspects of the SAN
- B. Adding new virtual machines
- C. Changes in ESX network connectivity
- D. Changes to LUN masking
- E. New LUNs created on the SAN storage arrays

Answer: A,D,E

Explanation:

A SAN is dynamic, and which LUNs are available to a certain host can change based on a number of factors including:

-New LUNs created on the SAN storage arrays

-

Changes to LUN masking

-

Changes in SAN connectivity or other aspects of the SAN The VMkernel discovers LUNs when it boots, and those LUNs are then visible in the VI Client. If changes are made to the LUNs, you must rescan to see those changes.

NEW QUESTION: 2

Your customer operates 20 company codes in 10 different countries and 3 continents. What is the minimum number of clients you must configure in the SAP S/4HANA system to depict this scenario?

- A. 0
- B. 1
- C. 2
- D. 3

Answer: D

Explanation:

The key word in the question is minimum. You have to think then if there are any restrictions to how many company codes, countries, or even continents. As there are no restrictions on what kind of organizational units are mapped on the client, the answer is that you can set everything up in a single client.

NEW QUESTION: 3

- A. Option H
- B. Option E
- C. Option D
- D. Option C
- E. Option F
- F. Option G
- G. Option B
- H. Option A

Answer: E,G,H

Explanation:

- Scenario: The SalesOrderDetail table holds the details about each sale. It is in the Sales schema owned by the SalesStaff Windows group. This table is constantly being updated, inserted

into, and read.

- Regardless of which office runs a sales force report, the SalesOrderDetail table should only return valid, committed order data; any orders not yet committed should be ignored.

- READ_COMMITTED_SNAPSHOT { ON | OFF } ON Enables Read-Committed Snapshot option at the database level. When it is enabled, DML statements start generating row versions even when no transaction uses Snapshot Isolation. Once this option is enabled, the transactions specifying the read committed isolation level use row versioning instead of locking. When a transaction runs at the read committed isolation level, all statements see a snapshot of data as it exists at the start of the statement. OFF Turns off Read-Committed Snapshot option at the database level. Transactions specifying the READ COMMITTED isolation level use locking. ALTER DATABASE SET Options (Transact-SQL) SET Statements (Transact-SQL)
