Verifying POTS and VoIP Dial Peer Configurations

You can check the validity of your dial peer configuration by performing the following tasks:

If you have relatively few dial peers configured, you can use the show dial-peer voice command to verify that the configuration is correct. To display a specific dial peer or to display all configured dial peers, use this command. The following is sample output from the show dial-peer voice command for a specific VoIP dial peer:

```
router# show dial-peer voice 10
```

```
VoiceOverIpPeer10
```

```
tag = 10, dest-pat = \Q',
```

```
incall-number = \Q+14087',
```

```
group = 0, Admin state is up, Operation state is down
```

```
Permission is Answer, type = voip, session-target = \Q',
```

```
sess-proto = cisco, req-qos = bestEffort,
```

```
acc-qos = bestEffort,
```

```
fax-rate = voice, codec = g729r8,
```

```
Expect factor = 10,Icpif = 30, VAD = disabled, Poor QOV Trap = disabled, Connect Time = 0, Charged Units = 0
```

```
Successful Calls = 0, Failed Calls = 0
```

```
Accepted Calls = 0, Refused Calls = 0
```

```
Last Disconnect Cause is ""
```

```
Last Disconnect Text is ""
```

```
Last Setup Time = 0
```

To show the dial peer that matches a particular number (destination pattern), use the show dialplan number command. The following example displays the VoIP dial peer associated with the destination pattern 51234:

```
router# show dialplan number 51234
Macro Exp.: 14085551234
VoiceOverIpPeer1004
