NEW QUESTION: 1

You are testing an application. The application includes methods named CalculateInterest and LogLine. The CalculateInterest() method calculates loan interest. The LogLine() method sends diagnostic messages to a console window. The following code implements the methods. (Line numbers are included for reference only.)

You have the following requirements:

The CalculateInterest() method must run for all build configurations.

The LogLine() method must run only for debug builds.

You need to ensure that the methods run correctly.

What are two possible ways to achieve this goal? (Each correct answer presents a complete solution.

Choose two.)

A. Insert the following code segment at line 05: #if DEBUG

Insert the following code segment at line 07: #endif

B. Insert the following code segment at line 01: #region DEBUG

Insert the following code segment at line 10 :#endregion

C. Insert the following code segment at line 01: #if DEBUG

Insert the following code segment at line 10: #endif
D. Insert the following code segment at line 05 :#region DEBUG
Insert the following code segment at line 07: #endregion
E. Insert the following code segment at line 10:
[Conditional("DEBUG")]
F. Insert the following code segment at line 01:
[Conditional("DEBUG")]
G. Insert the following code segment at line 10:
[Conditional("RELEASE")]

Answer: A,E

Explanation:

Explanation:

D: Also, it's worth pointing out that you can use

[Conditional("DEBUG")] attribute on methods that return void to have them only executed if a certain symbol is defined. The compiler would remove all calls to those methods if the symbol is not defined:

```
[Conditional("DEBUG")]  
void PrintLog() {  
    Console.WriteLine("Debug info");  
}  
void Test() {  
    PrintLog();  
}
```

G: When the C# compiler encounters an #if directive, followed eventually by an #endif directive, it will compile the code between the directives only if the specified symbol is defined. Unlike C and C++, you cannot assign a numeric value to a symbol; the #if statement in C# is Boolean and only tests whether the symbol has been defined or not. For example,

```
#define DEBUG  
#if DEBUG  
Console.WriteLine("Debug version");  
#endif
```

NEW QUESTION: 2

Your storage administrator informs you about some disk corruption issues in the disk subsystem where your Oracle Cluster Registry (OCR) is located. Your storage administrator has resolved these corruption issues by applying a patch to the storage subsystem, but to be sure that the OCR is not affected by this problem the administrator wants you to check the integrity of the OCR. How would you do this?

- A.** You can check whether the OCR is not corrupted by using the OCRCHECK command.
- B.** There is no easy way to check your OCR for corruptions.
- C.** You create a logical export from the OCR by using the

OCRCONFIG command and analyze the export file for errors.

D. You create a physical backup of the OCR by using the OCRCONFIG command, and if this succeeds without errors you know that the OCR is not corrupted.

E. You dump the OCR contents into a text file by using the OCRDUMP command, and if that succeeds without errors you know that your OCR is not corrupted.

Answer: A
