- A. bttmp
- B. wtmp
- C. auth.log
- D. user.log

Answer: D

NEW QUESTION: 2

A customer needs a new replication solution that makes use of capacity efficiency technologies, even though data is being replicated to another array.

You have been developing a solution that includes two HPE 3PAR arrays. What should you emphasize in your proposal?

- A. The arrays share deduplication hash tables, and the target array only needs to compress the replicated data from the source array
- B. Thin Technologies, deduplication, and compression can be used on both sides with volumes in Remote Copy groups
- C. Compression technologies increase the effective bandwidth being available for replication and disaster recovery
- D. The data being replicated will travel the connection between the arrays fully compressed and deduplicated

Answer: D

NEW QUESTION: 3

A customer has a Microsoft SQL Server database on an Azure VM. The customer wants to ensure that the database is backed up and stored in a geo-redundant storage location. Which solution should you recommend?

- A. Enable the Microsoft SQL Server backup agent on the VM and configure it to back up the database to an Azure Storage account in a different region.
- B. Enable the Microsoft SQL Server backup agent on the VM and configure it to back up the database to an Azure Storage account in the same region.
- C. Enable the Microsoft SQL Server backup agent on the VM and configure it to back up the database to an Azure Storage account in a different region, and enable geo-redundancy for the storage account.
- D. Enable the Microsoft SQL Server backup agent on the VM and configure it to back up the database to an Azure Storage account in the same region, and enable geo-redundancy for the storage account.
- E. Enable the Microsoft SQL Server backup agent on the VM and configure it to back up the database to an Azure Storage account in a different region, and enable geo-redundancy for the storage account, and enable soft delete for the storage account.
- F. Enable the Microsoft SQL Server backup agent on the VM and configure it to back up the database to an Azure Storage account in the same region, and enable geo-redundancy for the storage account, and enable soft delete for the storage account.
- G. Enable the Microsoft SQL Server backup agent on the VM and configure it to back up the database to an Azure Storage account in a different region, and enable geo-redundancy for the storage account, and enable soft delete for the storage account, and enable ransomware recovery for the storage account.
- H. Enable the Microsoft SQL Server backup agent on the VM and configure it to back up the database to an Azure Storage account in the same region, and enable geo-redundancy for the storage account, and enable soft delete for the storage account, and enable ransomware recovery for the storage account.

Answer: E

Explanation:

Note: SQL Database automatically creates a database backups and uses Azure read-access geo-redundant storage (RA-GRS) to provide geo-redundancy. These backups are created automatically and at no additional charge. You don't need to do anything to make them happen. Database backups are an essential part of any business continuity and disaster recovery strategy because they protect your data from accidental corruption or deletion.
