- D. Disasters in equipment rooms

Answer: C

NEW QUESTION: 2

Which device would be an NDMP server1?

- A. a NAS device
- B. a DAS device
- C. a disk storage device
- D. a tape storage device

Answer: A

NEW QUESTION: 3

A system administrator wants to confidentially send a user name and password list to an individual outside the company without the information being detected by security controls. Which of the following would BEST meet this security goal?

- A. Digital signatures
- B. Hashing
- C. Steganography
- D. Full-disk encryption

Answer: C

Explanation:

Explanation/Reference:

Explanation:

Steganography is the process of concealing a file, message, image, or video within another file, message, image, or video. Note: The advantage of steganography over cryptography alone is that the intended secret message does not attract attention to itself as an object of scrutiny. Plainly visible encrypted messages, no matter how unbreakable will arouse interest, and may in themselves be incriminating in countries where encryption is illegal. Thus, whereas cryptography is the practice of protecting the contents of a message alone, steganography is concerned with concealing the fact that a secret message is being sent, as well as concealing the contents of the message.
