Answer: B

Explanation:

Explanation/Reference:

Explanation:

The Set-SyncShare cmdlet modifies the settings for a sync share.

Example: Modify a sync share to add a user group

This example modifies settings on the share named Share01, and enables the user group named ContosoEngGroup to access the share.

The first command uses the Get-SyncShare cmdlet to retrieve the sync share for Share01, and assigns the results to the variable \$Current.

The second command uses the Set-SyncShare cmdlet to modify the sync share and add the current user and the ContosoEngGroup to the list of users allowed to access the share.

```
PS C:\> $Current = Get-SyncShare Share01
```

```
PS C:\> Set-SyncShare Share01 -User  
$Current.user,"ContosoEngGroup"
