Answer: B,D

NEW QUESTION: 3

- A. Option D
- B. Option A
- C. Option C
- D. Option B

Answer: A

Explanation:

The Internet Protocol Suite, TCP/IP, is a suite of protocols used for communication over the internet. The TCP/IP model was created after the OSI 7 layer model for two major reasons. First, the foundation of the Internet was built using the TCP/IP suite and through the spread of the World Wide Web and Internet, TCP/IP has been preferred. Second, a project researched by the Department of Defense (DOD) consisted of creating the TCP/IP protocols. The DOD's goal was to bring international standards which could not be met by the OSI model. Since the DOD was the largest software consumer and they preferred the TCP/IP suite, most vendors used this model rather than the OSI. Below is a side by side comparison of the TCP/IP and OSI models.

TCP/IP Model	VS.	OSI Model
Application Layer	7	Application
Layer 6	Presentation	Layer 5
Session	Transport	Layer 4
Layer 3	Network	Network
Access	Layer 2	Data
Link	Layer 1	Physical

NEW QUESTION: 4

Which of the following is the sequence of the job phases as they flow through the system?

- A. Input, Purge, Convert, Output, Process, Print
- B. Input, Output, Convert, Process, Purge, Print
- C. Input, Process, Print, Convert, Purge, Output
- D. Input, Convert, Process, Output, Print, Purge

Answer: D
