If you get one certification successfully with help of our AWS-SysOps exam prep materials you can find a high-salary job in more than one hundred countries worldwide where these certifications are available.

Besides, at the end of each test the result will be declared along with the mistakes, so that you can know your weakness and strengthen about AWS-SysOps AWS Certified SysOps Administrator - Associate actual test, then make the detail study plan for further learning.

NEW QUESTION: 1

Refer to the exhibit. When a VSS configuration is reviewed, it is determined that the nodes are not detecting each other. Which option is the issue with the switches?

- A. Additional port-channel links are required
- B. The Switch virtual domains incorrect
- C. The switches have not been restarted after the VSS configuration application
- D. 10GB Ethernet must be confirmed

Answer: B

NEW QUESTION: 2

Refer to the exhibit. .

A network administrator has begun configuring a Protocol Independent Multicast Sparse Mode (PIM-SM) solution on all of the network infrastructure devices shown in the exhibit. The administrator has selected the static method for configuring rendezvous (RPs) and wants to use 4 as RP.

Where must the administrator configure the static RP setting?

- A. On IRF 3 and IRF 4 only
- B. On IRF 2, IRF 3, and IRF 4 only
- C. On switch 1, IRF 2, IRF 3, and IRF 4
- D. On IRF 2 and IRF 3 only

Answer: B

Explanation:

<http://mrncciew.com/2013/01/19/pim-sm-static-rp-configurations/>
In Static-RP configuration, you need to configure "ip pim rp-address x.x.x.x" command on every multicast enable router in your network including RP itself. In this example we will make CME as RP in this network.

NEW QUESTION: 3

- A. Option A
- B. Option C
- C. Option E
- D. Option B
- E. Option D

Answer: E

NEW QUESTION: 4

You display the IP interface information with `ipmpstat -i`. Which two characteristics are indicated by characters that may be included in the FLAGS column?

- A. unusable due to being inactive
- B. nominated to send/receive IPv4 multicast for its IPMP group
- C. allocated to global zone
- D. default route
- E. IP forwarding enabled IS

Answer: A,B

Explanation:

Explanation/Reference:

Explanation:

FLAGS

Indicates the status of each underlying interface, which can be one or any combination of the following:

(D) d indicates that the interface is down and therefore unusable.

(E) M indicates that the interface is designated by the system to send and receive IPv6 multicast traffic for the IPMP group.

Note:

i indicates that the INACTIVE flag is set for the interface. Therefore, the interface is not used to send or receive data traffic.

s indicates that the interface is configured to be a standby interface.

m indicates that the interface is designated by the system to send and receive IPv4 multicast traffic for the IPMP group.

b indicates that the interface is designated by the system to receive broadcast traffic for the IPMP group.

h indicates that the interface shares a duplicate physical hardware address with another interface and has been taken offline. The h flag indicates that the interface is unusable.
