Answer: D

Explanation:

For two managed instances to participate in a failover group, there must be either ftoute or a gateway configured between the virtual networks of the two managed instances to allow network communication.

You create the two VPN gateways and connect them.

Create the gateway for the virtual network of your primary managed instance using the Azure portal.

Create the gateway for the virtual network of your secondary managed instance using the Azure portal.

Create a bidirectional connection between the two gateways of the two virtual networks.

NEW QUESTION: 2

Shelly has created an ad for the Google Content Network, and her ad has been running for four days. Shelly decides that she needs to add some negative keywords to her campaign to refine the results and the keywords that trigger her ad. How does Shelly add negative keywords for her campaign?

A. Shelly will click the campaign she wants to refine, then she will click the Settings tab, and then she will click the Negative keywords options, and add the negative keywords.

B. Shelly will click the campaign she wants to refine, then she will click the Opportunities tab, and then she will click the Negative keywords options, and add the negative keywords.

C. Shelly will click the campaign she wants to refine, then she will click the Keywords tab, and then she will click the Negative keywords options, and add the negative keywords.

D. Shelly will click the campaign she wants to refine, then she will click the Settings tab, and then she will click the keywords options, and add the negative keywords.

Answer: C

NEW QUESTION: 3

What types of miscellaneous permissions are supported for MDF talent Pools?

There are 2 correct answers to this question.

Response:

- A. Succession Approval permission
- B. Object Level Permission
- C. Field Level override permission
- D. Succession Planning permission

Answer: B,C

NEW QUESTION: 4

Which option describes how DNS snooping is used on the Cisco ASR 5000?

A. DNS snooping allows the Cisco ASR 5000 to enable set of dynamic domain rules to be installed based on the response to DNS queries sent by a subscriber that matches a configured domain rule definition.

Dynamic domain rules are created for the DNS responses within the same rule that has the domain name, which applies the same charging action to these dynamic rules.

B. DNS snooping allows the Cisco ASR 5000 to snoop DNS query packets and compare against known DNS responses. If a match is found, the Cisco ASR 5000 replies to the query itself instead of forwarding the query to the destination DNS server.

C. DNS snooping allows the Cisco ASR 5000 to enable set of dynamic IP rules to be installed based on the response to DNS queries sent by a subscriber that matches a configured domain rule definition.

Dynamic IP rules are created for these IP entries within the same rule that has the domain name, which applies the same charging action to these dynamic rules.

D. DNS snooping allows the Cisco ASR 5000 to detect if a DNS response sent back to a subscriber is valid. If the response is invalid, the Cisco ASR 5000 drops the packet.

Answer: C
