NEW QUESTION: 1

DRAG DROP

You are developing a SQL Server Analysis Services (SSAS) multidimensional project. The project file includes two cubes named Finance and Operations. The project also includes a dimension named Date.

The Date dimension includes two hierarchies named Fiscal and Calendar. The Date dimension has been added to both cubes.

You need to disable the Fiscal hierarchy in the Operations cube without impacting other database objects.

Which three actions should you perform in sequence? (To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.) Select and Place:

Answer:

Explanation:

Explanation/Reference:

Note:

* The value of the AttributeHierarchyEnabled property determines whether an attribute hierarchy is created. If this property is set to False, the attribute hierarchy is not created and the attribute cannot be used as a level in a user

hierarchy; the attribute hierarchy exists as a member property only. However, a disabled attribute hierarchy can still be used to order the members of another attribute. If the value of the `AttributeHierarchyEnabled` property is set to `True`, the value of the `AttributeHierarchyVisible` property determines whether the attribute hierarchy is visible independent of its use in a user-defined hierarchy.

* To set the attribute hierarchy properties in the Employee dimension

1. Switch to Dimension Designer for the Employee dimension, and then click the Browser tab.

2. Verify that the following attribute hierarchies appear in the Hierarchy list:

Base Rate

Birth Date

Login ID

Manager SSN

SSN

3. Switch to the Dimension Structure tab, and then select the following attributes in the Attributes pane, by using the CTRL key to select multiple attributes at the same time:

Base Rate

Birth Date

Login ID

Manager SSN

SSN

4. In the Properties window, set the value of the `AttributeHierarchyEnabled` property to `False` for the selected attributes.

Etc.
