it is an obvious fact that these tools can really let you find Trust completely on the reliable helping stuff of Mecatronica to gain better understanding of the course of updated SAP C-S4CMA-2105 audio lectures.

NEW QUESTION: 1

You need to implement tracing for the website after the website is deployed.

Which code segment should you insert at line CF13?

- A. Option B
- B. Option A
- C. Option C
- D. Option D

Answer: C

Explanation:

Topic 8, Mortgage Loan

Background

A company is developing a website that supports mortgage loan processing. You use the Azure management portal to create a website. You initially configure the website to use the Basic hosting plan. You register a custom domain for the website with a valid registrar.

Customers complete mortgage applications and upload supporting documents to the website. A custom executable named FileProcessor.exe processes all of the information received. An on-premises server that runs Windows Server hosts the executable.

You create a virtual hard disk (VHD) image of the on-premises server. You plan to use this VHD to replace the on-premises server with a new virtual machine (VM) that is hosted in Azure.

Business Requirements

Business stakeholders have identified the following requirements for the mortgage loan processing website:

The website must provide a secure mortgage application process for the customer.

- * Business users must validate new versions of the website before you publish them to the production

- * site. You must be able to revert to the previous version easily when issues arise.

The website must remain available to users while new features and bug fixes are deployed.

- * Network traffic must be monitored on all ports that the website uses.

- * Technical Requirements

General:

You must develop the website by using Microsoft Visual Studio 2013.

- * The website must be stateless. Subsequent requests from a user might or might not be routed back to

- * the website instance that the user initially connected to.

Security:

You must secure the custom domain and all subdomains by using SSL.

Storage:

The custom executable must use native file system APIs to share data between different parts of the

- * website.

The custom executable must continue to use a network file share to access files.

- * Monitoring:

The website must use port 6000 with UDP to submit information to another process. This port must be actively monitored by

- B. Oracle 11g
- C. DB2
- D. MySQL

Answer: A
