ScanState

You run ScanState on the source computer during the migration.

You must run ScanState.exe on computers running Windows Vista and Windows 7 from an administrative command prompt. When running ScanState on a source computer that has Windows XP installed, you need to run it as a user that is a member of the local administrators group. The following command creates an encrypted store named Mystore on the file share named Migration on the file server named Fileserver that uses the encryption key Mykey:

```
scanstate \\fileserver\migration\mystore /i:migapp.xml  
/i:miguser.xml /o /config:config.xml /encrypt /key:"mykey"
```

Space Estimations for the Migration Store

When the ScanState command runs, it will create an .xml file in the path specified. This .xml file includes

improved space estimations for the migration store.

The following example shows how to create this .xml file:

```
Scanstate.exe C:\MigrationLocation [additional parameters]  
/p:"C:\MigrationStoreSize.xml"
```

To preserve the functionality of existing applications or scripts that require the previous behavior of USMT, you can use the /p option, without specifying "pathtoafile", in USMT 4.0. If you specify only the /p option, the storage space estimations are created in the same manner as

with USMT 3.x releases.

User State Migration Tool

USMT 4.0 is a command-line utility that allows you to automate the process of user profile migration. The USMT is part of the Windows Automated Installation Kit (WAIK) and is a better tool for performing a large number of profile migrations than Windows Easy Transfer. The USMT can write data to a removable USB storage device or a network share but cannot perform a direct side-by-side migration over the network from the source to the destination computer. The USMT does not support user profile migration using the Windows Easy Transfer cable. USMT migration occurs in two phases, exporting profile data from the source computer using ScanState and importing profile data on the destination computer using LoadState.
