Which layer of the DoD TCP/IP Model ensures error-free delivery and packet sequencing?

- A. Host-to-host
- B. Internet layer
- C. Network access layer
- D. Application layer

#### **Answer: A**

Explanation:

This layer of the DoD Model is also sometimes called Transport in some books but the proper name is Host-to-Host as per the RFC document.

The host-to-host layer provides for reliable end-to-end communications, ensures the data's error-free delivery, handles the data's packet sequencing, and maintains the data's integrity.

It is comparable to the transport layer of the OSI model.
