NEW QUESTION: 3

What are the three general types of Data Monitors?

- A.** event-based, event graph, and non-event based
- B.** event-based, matching conditions and non-event based
- C.** event-based, correlation, and aggregation matching
- D.** event-based, correlation, and non-event based

Answer: B

NEW QUESTION: 4

A customer has three users and is planning to ingest 250GB of data per day. They are concerned with search uptime, can tolerate up to a two-hour downtime for the search tier, and want advice on single search head versus a search head cluster. (SHC).

Which recommendation is the most appropriate?

- A.** The customer should deploy a single search head with a warm standby search head and an rsync process to synchronize configurations.
- B.** The customer should deploy a SHC, because it will be required to support the high volume of data.
- C.** The customer should deploy a SHC with a single member for HA; more members can be added later.
- D.** The customer should deploy two active search heads behind a

load balancer to support HA.

Answer: A
