There is no company can surpass our unique CCAK : Certificate of Cloud Auditing Knowledge exam prep torrent, As a result, the customers may be more interested in studying for the exams with our CCAK exam prep as they may regard answering the question in the exam files as crossing the obstacles.

With our professional CCAK Training exam software, you will be at ease about your CCAK Training exam, and you will be satisfied with our after-sale service after you have purchased our CCAK Training exam software.

NEW QUESTION: 1

Which two tasks are required for configuring SNMP to send traps on a Cisco IOS device? (Choose two.)

- A. Create access controls for an SNMP community.
- B. Configure SNMP status monitoring and troubleshooting.
- C. Configure SNMP server group names.

- D. Configure the SNMP server engine ID.
- E. Configure SNMP notifications.
- F. Configure the SNMP agent.

Answer: A,E

Explanation:

The best current practices recommend applying Access Control Lists (ACLs) to community strings and ensuring that the requests community strings are not identical to notifications community strings. Access lists provide further protection when used in combination with other protective measures. This example sets up ACL to community string:

```
access-list 1 permit 1.1.1.1 snmp-server community string1 ro 1
```

- SNMP Notifications A key feature of SNMP is the ability to generate notifications from an SNMP agent. These notifications do not require that requests be sent from the SNMP manager. Unsolicited (asynchronous) notifications can be generated as traps or inform requests. Traps are messages alerting the SNMP manager to a condition on the network. Inform requests (informs) are traps that include a request for confirmation of receipt from the SNMP manager. Notifications can indicate improper user authentication, restarts, the closing of a connection, loss of connection to a neighbor router, or other significant events.
