NEW QUESTION: 1

Given the code fragment:

Which code fragment, inserted at line n1, prints The Top element: 30?

- A. Option B
- B. Option D
- C. Option E
- D. Option C
- E. Option A

Answer: D

NEW QUESTION: 2

Scenario: A network engineer is configuring a network. The network engineer wants to ensure that the network is stable and that the network is not affected by a link failure. The network engineer wants to ensure that the network is not affected by a link failure. The network engineer wants to ensure that the network is not affected by a link failure.

A. The network engineer wants to ensure that the network is stable and that the network is not affected by a link failure. The network engineer wants to ensure that the network is not affected by a link failure. The network engineer wants to ensure that the network is not affected by a link failure.

B. The network engineer wants to ensure that the network is stable and that the network is not affected by a link failure. The network engineer wants to ensure that the network is not affected by a link failure. The network engineer wants to ensure that the network is not affected by a link failure.

C. The network engineer wants to ensure that the network is stable and that the network is not affected by a link failure. The network engineer wants to ensure that the network is not affected by a link failure. The network engineer wants to ensure that the network is not affected by a link failure.

D. The network engineer wants to ensure that the network is stable and that the network is not affected by a link failure. The network engineer wants to ensure that the network is not affected by a link failure. The network engineer wants to ensure that the network is not affected by a link failure.

Answer: D

Explanation:

Two terms that appear often in the EIGRP world are "successor" and "feasible successor". A successor is the route with the best metric to reach a destination. That route is stored in the routing table. A feasible successor is a backup path to reach that same destination that can be used immediately if the successor route fails. These backup routes are stored in the topology table.

NEW QUESTION: 3

You need to configure the term store group to meet the requirements. Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Answer:

Explanation:

Explanation

Scenario: Each department must have its own term store group. Stakeholders must be notified when term sets are moved or

deleted
