NEW QUESTION: 1

DRAG DROP

You need to ensure that sponsors can interact with the GamerData service by using the same credentials as they use for other LitWare, Inc. services.

Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Answer :

Explanation:

=====

Topic 9, Fourth Coffee

Background

You are a developer working for Fourth Coffee, a company that sells coffee and coffee accessories through an Azure-based website and retail locations. Features of the website include the ability to write product reviews, comment on reviews and find whether a particular product is available at a specific retail location.

Fourth Coffee licenses a product from Contoso, Ltd, that provides an Azure-based website for users in Japan. The website includes reviews and comments. All comments and product reviews are shared between Fourth Coffee's website and the Japanese website.

Business Requirements

Product Reviews

User-submitted product reviews are provided by Contoso and are stored in the Japanese language in an HTML file format. When a review is submitted, you must remove specific keywords from the review and translate the review to the English language before you load the review onto the Fourth Coffee website. Translation processing and migration must occur with a minimum delay.

Product reviews can be loaded by third party websites, but only after they are processed and reviewed by Fourth Coffee employees. Reviews can be loaded up to one year after they are made public on the Fourth Coffee website.

Comments

Users can post comments about product reviews. After a comment is posted, all other users who comment on that product receive a notification on their Android or Windows Phone device.

Technical Requirements

Product Reviews

The product reviews from Contoso are stored as HTML files in BLOB storage with the format `"/reviews/<guid>.html"`. Fourth Coffee stores reviews in BLOB storage, with the format `"/users/reviews/<guid>.md"` where `<guid>` matches the file name of the review. After a Fourth Coffee employee approves the review, a metadata property named `Reviewed` with the value `true` is set on the BLOB.

Some product reviews contain language-specific terms that require additional processing.

The additional processing is done by a python script named `cleanup.py`. The script relies on a data file `names.term.data` that contains terms and their replacement values. All running instances of the script must use the same instance of the data file.

Security

To simplify the security configuration, Contoso and Fourth Coffee agree to configure the website and services to allow for communication between the services without the traffic being visible on the public Internet.

To prevent third parties from harvesting review data, whenever the system returns public reviews, it records the IP address of the request and increments a count of the times that data is retrieved from a particular IP address. If an IP address makes more than 10 requests a minute, the client must be redirected to a static page named `ratelimit.html`.

Azure

The Fourth Coffee website and related services that run on Azure are located in the US West region and are on a single virtual network named Main with the address `10.1.0.0/16`.

The Contoso website and related services that run on Azure are located in the Japan West region and are on a single virtual network named CT with the address `10.2.0.0/24`.

Comments

Product review comments must be processed, at most, one time. When a comment is posted, it must be associated with the identity of the user who posted the comment.

Product review comments are indexed by a web service that accepts the body of the comment in an HTTP POST. When comments are ported, they must be indexed for search within 15 minutes. Each comment must be indexed exactly once. All mobile device notifications are sent by using the Azure Notification Hub service.

Application Structure

CommentIndexer.cs

Relevant portions of the `CommentIndexer.cs` file are shown below. Line numbers are included for reference only and include a two-character prefix that denotes the specific file to which the code belongs.

ReviewController.cs

Relevant portions of the `ReviewController.cs` file are shown below. Line numbers are included for reference only and include a two-character prefix that denotes the specific file to which the code belongs.

TranslateJob.cs

Relevant portions of the `TranslateJob.cs` file are shown below. Line numbers are included for reference only and include a two-character prefix that denotes the specific file to which the code belongs.

AccessRateFilter.cs

Relevant portions of the `AccessRateFilter.cs` file are shown below. Line numbers are included for reference only and include a two-character prefix that denotes the specific file to which the code belongs.

NEW QUESTION: 2

Recovery Site Strategies for the technology environment depend

on how much downtime an organization can tolerate before the recovery must be completed. What would you call a strategy where the alternate site is internal, standby ready, with all the technology and equipment necessary to run the applications?

- A. Internal Hot Site
- B. Warm Site
- C. External Hot site
- D. Dual Data Center

Answer: A

Explanation:

Explanation/Reference:

Explanation:

An internal hot site is standby ready with all the technology and equipment necessary to run the applications to be recovered there.

Incorrect Answers:

A: An external hot site has equipment on the floor waiting for recovery, but the environment must be rebuilt for the recovery. An external hot site is not standby ready.

B: A warm site is not standby ready. A warm site is a leased or rented facility that is usually partially configured with some equipment, such as HVAC, and foundational infrastructure components, but not the actual computers. In other words, a warm site is usually a hot site without the expensive equipment such as communication equipment and servers.

D: A dual data center is employed for application that can accept any downtime without unacceptably impacting the business. A dual data center would be more than standby ready, but it would be more expensive.

NEW QUESTION: 3

Which operating systems are supported for use with Image Streamer? (Choose two.)

- A. VMware ESXi 6.7
- B. CentOS 7.2
- C. SUSE Linux Enterprise Server 11
- D. Red Hat Enterprise Linux 7.3
- E. Windows Hyper-V 2019

Answer: D,E
