Users can easily pass the CPST-001 exam by learning our CPST-001 practice materials, and can learn some new knowledge in this field for you have a brighter future.

Also, if you fail the exam and wants to retake the exam, your exam fees will be on us, Not only do we offer free demo services before purchase, we also provide three learning modes of CPST-001 learning guide for users.

On condition that you fail the exam after using our CPST-001 study prep unfortunately, we will switch other versions for you or give back full of your refund, Choose our best braindumps training material for CPST-001 GAQM braindumps in very cheap and reasonable prices.

Second, mock exam is available in our CPST-001 PC version for you to get used to the exam atmosphere and get over your tension towards the approaching exam, so you can perform well in the real exam.

NEW QUESTION: 1

Lab Simulation

Company A has noticed abnormal behavior targeting their SQL server on the network from a rogue IP address.

The company uses the following internal IP address ranges: 192.10.1.0/24 for the corporate site and 192.10.2.0/24 for the remote site.

The Telco router interface uses the 192.10.5.0/30 IP range.

Instructions: Click on the simulation button to refer to the

Network Diagram for Company A.

Click on Router 1, Router 2, and the Firewall to evaluate and configure each device.

Task 1: Display and examine the logs and status of Router 1, Router 2, and Firewall interfaces.

Task 2: Reconfigure the appropriate devices to prevent the attacks from continuing to target the SQL server and other servers on the corporate network.

Answer:

Explanation:

We have traffic coming from two rogue IP addresses:

192.10.3.204 and 192.10.3.254 (both in the

192.10.30.0/24 subnet) going to IPs in the corporate site subnet (192.10.1.0/24) and the remote site subnet

(192.10.2.0/24). We need to Deny (block) this traffic at the firewall by ticking the following two checkboxes:

NEW QUESTION: 2

Watson IBM

Watson IBM

A. ...

B. ...

C. ...

D. ...

Answer: D

NEW QUESTION: 3

Your company has a single Active Directory domain named contoso.com. All servers run Windows Server 2008. You have a public DNS server named Server1, and an e-mail server named Server2.

Client computers outside the company domain are unable to send e-mail messages to contoso.com. You verify that the host (A) DNS record for Server2 is available to external client computers.

You need to ensure that Server2 can receive e-mail messages from external client computers. How should you configure the contoso.com DNS zone?

A. Add a Mail Exchanger (MX) record for Server2.

B. Add a Mailbox (MB) record for Server2. Set the Mailbox Host

setting to Server2.

C. Add a Service Location (SRV) record for Server2. Set the Service field to `_smtp`. Set the Protocol field to `_tcp`. Set the Port Number to 25.

D. Add a Canonical (CNAME) record that maps Server2 to contoso.com.

Answer: A

Explanation:

Explanation/Reference: MX Resource Records

The mail exchange (MX) resource record specifies a mail exchange server for a DNS domain name. A mail exchange server is a host that will either process or forward mail for the DNS domain name. Processing the mail means either delivering it to the addressee or passing it to a different type of mail transport. Forwarding the mail means sending it to its final destination server, sending it using Simple Mail Transfer Protocol (SMTP) to another mail exchange server that is closer to the final destination, or queuing it for a specified amount of time.

NEW QUESTION: 4

You install a local printer on a computer. You share the printer.

You need to ensure that only members of a local group named Group1 can print documents on the printer.

Which settings should you modify on the printer?

- A.** Share
- B.** Security
- C.** Priority
- D.** Printing preferences

Answer: B

Explanation:

Restricting printer access to selected users by using security groups If you need to restrict the access of certain shared printers to a certain group of network users, do the following:
-Create a security group and then add members to the security group. - Assign printer access permissions.

To create a security group and add member to the group

1. Open the Windows SBS Console.
2. On the navigation bar, click the Users and Groups tab, and then click Groups.
3. In the task pane, click Add a new group. The Add a New Group Wizard appears. In the Add a New Group Wizard, do the following:
 1. On the Add a new group page, for Group type, select Security group.
 2. On the Select groups members for <groupname> page, from the Users and groups list, add the network users who you want to include for the restricted printer access.
 3. Follow the instructions to complete the wizard. To assign printer access permissions
1. Open the Windows SBS Console.
2. On the navigation bar, click the Network tab, and then click Devices.
3. From the list of printers displayed in the Printers section, click the printer that you want to view the properties

for. Then in the task pane, click Printer Properties.4. In the Printer Properties dialog box, click the Security tab, and then remove all entries in the Groups or user names list box except Administrators and Creator Owner.5. To grant access to the printer, click Add, and then enter the names of the group or users that you want to grant access to this printer.
