Answer: D,E
Explanation:

RLOC and the destination IP address of the RLOC of an Egress Tunnel Router (ETR).

After the encapsulation, the original packet become a LISP packet.

ETR is the function that receives LISP encapsulated packets, decapsulates them and forwards to its local EIDs. This function also requires EID-to-RLOC mappings so we need to point out an "map-server" IP address and the key (password) for authentication.

A LISP proxy ETR (PETR) implements ETR functions on behalf of non-LISP sites. A PETR is typically used when a LISP site needs to send traffic to non-LISP sites but the LISP site is connected through a service provider that does not accept no routable EIDs as packet sources. PETRs act just like ETRs but for EIDs that send traffic to destinations at non-LISP sites. Map Server (MS) processes the registration of authentication keys and EID-to-RLOC mappings. ETRs sends periodic Map-Register messages to all its configured Map Servers.

Map Resolver (MR): a LISP component which accepts LISP Encapsulated Map Requests, typically from an ITR, quickly determines whether or not the destination IP address is part of the EID namespace

NEW QUESTION: 4

AWS <https://aws.amazon.com/blogs/startups/expanding-kloudless-global-reach-by-bridging-regions/>

A. <https://aws.amazon.com/blogs/startups/expanding-kloudless-global-reach-by-bridging-regions/>

B. <https://aws.amazon.com/blogs/startups/expanding-kloudless-global-reach-by-bridging-regions/>

C. <https://aws.amazon.com/blogs/startups/expanding-kloudless-global-reach-by-bridging-regions/>

D. <https://aws.amazon.com/blogs/startups/expanding-kloudless-global-reach-by-bridging-regions/>

Answer: D
