**Answer:**

Explanation:

Explanation:

Box 1: Using a workspace membership

Scenario:

The company wants to provide a single package of reports to the board that contains custom navigation and links to supplementary information.

Note: Workspace is a shared environment for a group of people. You can have multiple Power BI content in a workspace. One workspace can have hundreds of dashboards, reports, and datasets in it.

Box 2: A mail-enabled security group

Scenario: Security Requirements

The reports must be made available to the board from powerbi.com. A mail-enabled security group will be used to share information with the board.

**NEW QUESTION: 2**

Your company has placement groups in two different availability zones. There is a large project coming up and, although resilience is important, cost and speed are the most important factors.

The servers in each placement group need to be able to achieve the highest speed possible. How can this be achieved?

Choose the correct answer:

- A. In the CLI, run the command "aws ec2 set-placement-group 1 " for all of the instances.
- B. Peer the two placement groups using AWS PG Peering.
- C. Create AMIs from all of the instances, terminate them, and deploy them all into one placement group.
- D. Duplicate the VPC, peer the new VPC, create AMIs of the instances, terminate them, and redeploy them in two separate placement groups between the two VPCs.

**Answer: C**

Explanation:

There is no AWS PG Peering option, Duplicating the VPC does not align with the cost concern, there is no "aws ec2 set-placement-group" command.

**NEW QUESTION: 3**

The IGMP snooping configuration is as follows:

```
#
vlan batch 3
#
igmp-snooping enable
#
vlan 3
igmp-snooping enable
#
interface GigabitEthernet1/0/1
port hybrid tagged vlan 3
I2-multicast static-group group-address 225.1.1.1 to 225.1.1.3
vlan 3
#
interface GigabitEthernet3/0/1
port hybrid tagged vlan 3
igmp-snooping static-router-port vlan 3
```

Which of the following statements are correct?

- A.** The device connected to GE 3/0/1 is a multicast router.
- B.** The device connected to GE 1/0/1 can send Report messages to receive multicast data for multicast groups outside the 225.1.1.1 to 225.1.1.3 range.
- C.** The device connected to GE 1/0/1 can receive multicast traffic only for the multicast groups 225.1.1.1 to 225.1.1.3 because static multicast groups are configured on GE 1/0/1.
- D.** IGMP snooping has been enabled on the switch.

**Answer: B**
