#### **Answer:**

Explanation:

Explanation:

Step 1: Run sysprep.exe on VM1.

If a template, or system image is used, System administrators

must run the Sysprep tool to clear the SID information. The Sysprep tool is usually one of the last tasks performed by a system administrator when building a server image/template, that way each clone of the template will generalize a new unique SID for every server image copied from the template and will prepare the server for a first time boot.

The end result is a System template that functions as a new unique build every time it is deployed.

Step 2: From Azure CLI, deallocate VM1 and mark VM1 as generalized

To create an image, the VM needs to be deallocated. Deallocate the VM with Stop-AzVm. Then, set the state of the VM as generalized with Set-AzVm so that the Azure platform knows the VM is ready for use a custom image Step 3: Create a virtual machine scale set Now create a scale set with New-AzVmss that uses the -ImageName parameter to define the custom VM image created in the previous step.

## NEW QUESTION: 3

HOTSPOT

Case Study

This is a case study. Case studies are not timed separately. You can use as much exam time as you would like to complete each case. However, there may be additional case studies and

sections on this exam. You must manage your time to ensure that you are able to complete all questions included on this exam in the time provided.

To answer the questions included in a case study, you will need to reference information that is provided in the case study. Case studies might contain exhibits and other resources that provide more information about the scenario that is described in the case study. Each question is independent of the other question on this case study.

At the end of this case study, a review screen will appear. This screen allows you to review your answers and to make changes before you move to the next sections of the exam. After you begin a new section, you cannot return to this section.

To start the case study

To display the first question on this case study, click the Next button. Use the buttons in the left pane to explore the content of the case study before you answer the questions. Clicking these buttons displays information such as business requirements, existing environment, and problem statements. If the case study has an All Information tab, note that the information displayed is identical to the information displayed on the subsequent tabs. When you are ready to answer a question, click the Question button to return to the question.

Overview

General Overview

Fabrikam, Inc. is a financial services organization. Fabrikam recently purchased another financial services organization named Contoso, Ltd.

Fabrikam has 2,000 users. Contoso has 500 users.

Windows 10 and Office 2016 are deployed to all computers.

Physical Locations

Fabrikam has an office in the United States. Contoso has an office in the United Kingdom.

The offices connect to each other by using a WAN link. Each office also connects directly to the Internet.

Existing Environment

Active Directory

The network of Fabrikam contains an Active Directory forest. The Active Directory Environment of Contoso was migrated to the Active Directory forest of Fabrikam. The forest contains three domains named fabrikam.com, contractor.fabrikam.com, and contoso.com.

All domain controllers run Windows Server 2008 R2.

All contractors outsourced by Fabrikam use the user principal name (UPN) suffix of contractor.fabrikam.com. If Fabrikam hires the contractor as a permanent employee, the UPN suffix changes to fabrikam.com.

Network

The network has the following configurations:

External IP address for the United States office: 192.168.1.100

External IP address for the United Kingdom office:  
192.168.2.100

Internal IP address range for the United States office:  
10.0.1.0/24

Internal IP address range for the United Kingdom office:  
10.0.2.0/24

Active Directory Federation Services (AD FS)

AD FS and Web Application Proxies are deployed to support an app for the sales department. The app is accessed from the Microsoft Azure portal.

Office 365 Tenant

You have an Office 365 subscription that has the following configurations:

Organization name: Fabrikam Financial Services

Vanity domain: Fabrikamfinancialservices.onmicrosoft.com

Microsoft SharePoint domain:

Fabrikamfinancialservices.sharepoint.com

Additional domains added to the subscription: Contoso.com and fabrikam.com

Requirements

Planned Changes

Fabrikam plans to implement the following changes:

Deploy Azure AD Connect.

Move mailboxes from Microsoft Exchange 2016 to Exchange Online.

Deploy Azure multi-factor authentication for devices that connect from untrusted networks only.

Deploy the Azure Authenticator app and the Company Portal app to all mobile devices.

Customize the AD FS sign-in webpage to include the Fabrikam logo, a helpdesk phone number, and a

sign-in description.

Once all of the Fabrikam users are replicated to Azure Active Directory (Azure AD), assign an E3

license to all of the users in the United States office.

Technical Requirements

Contoso identifies the following technical requirements:

When a device connects from an untrusted network

to <https://outlook.office.com>, ensure that users must

type a verification code generated from a mobile app.

Ensure that all users can access Office 365 services from a web browser by using either a UPN or their

primary SMTP email address.

After Azure AD Connects is deployed, change the UPN suffix of all the users in the Contoso sales

department to fabrikam.com.

Ensure that administrators are notified when the health information of Exchange Online changes.

Use Office 365 reports to review previous tasks performed in Office 365.

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You deploy Azure AD Connect.

You modify the UPN suffix of each sales department user to fabrikam.com.

You need to ensure that the Active Directory changes are updated in Office 365.

What command should you run? To answer, select the appropriate options in the answer area.

Hot Area:

**Answer:**

Explanation:

Explanation/Reference:

Explanation:

The Set-MsolUserPrincipalName cmdlet is used to change the User Principal Name, or user ID, of a user.

It can be used to move a user between a federated and standard domain, which results in their authentication type changing to that of the target domain.

view=azureadps-1.0

**NEW QUESTION: 4**

A company needs to create new items that can be company owned or vendor owned.

You need to create and set up the items so that they can be used as company owned or consignment.

What should you do?

**A.** Assign a moving average costing inventory model

**B.** Activate owner dimension and assign a standard costing

inventory model

C. Assign a non-stock service item model group

D. Activate batch dimension and assign a standard costing inventory model

**Answer: B**
