### **AAFM Trustable CWM\_LEVEL\_1 Reliable Test Cost " Pass CWM\_LEVEL\_1 First Attempt**

The latest certification training materials for AAFM Latest CWM\_LEVEL\_1 Test Practice practice test are concluded by our certified trainers with a highest standard of accuracy and profession.

For example, bank card, credit card and so on, If you are still hesitating about whether you can get CWM\_LEVEL\_1 certification through the exam, we believed that our CWM\_LEVEL\_1 study materials will be your best choice, it will tell you that **Reliable CWM\_LEVEL\_1 Test Cost** passing the exam is no longer a dream for you, and it will be your best assistant on the way to passing the exam.

And the pass rate of our CWM\_LEVEL\_1 study guide is high as 98% to 100%, which also prove our excellent quality, This training materials is helpful to the candidates.

The CWM\_LEVEL\_1 training vce which designed by our website can help you pass the exam the first time, AAFM Certification-Dumps AAFM Certification CWM\_LEVEL\_1 real dumps and practice questions are written and formatted by Certified CWM\_LEVEL\_1 Free Test Questions Senior AAFM Certification working in today's prospering companies and data centers all over the world!

If you believe us and study our Prep4sure materials seriously you will 100% pass CWM\_LEVEL\_1 exams, Our aim is to provide reliable and high quality CWM\_LEVEL\_1 pass-sure cram for you.

We are being imitated so many years, but never being surpassed, our high passing rate of CWM\_LEVEL\_1 exams cram makes us keep a good reputation in this line, High passing rate with reasonable

price.

Our CWM\_LEVEL\_1 exam questions have a very high hit rate, of course, will have a very high pass rate.

**NEW QUESTION: 1**

Task: Determine the types of attacks below by selecting an option from the dropdown list.

**Answer:**

Explanation:

Explanation

A: Phishing is the act of sending an email to a user falsely claiming to be an established legitimate enterprise in an attempt to scam the user into surrendering private information that will be used for identity theft.

Phishing email will direct the user to visit a website where they are asked to update personal information, such as a password, credit card, social security, or bank account numbers, that the legitimate organization already has. The website, however, is bogus and set up only to steal the information the user enters on the page.

B: Whaling is a specific kind of malicious hacking within the more general category of phishing, which involves hunting for data that can be used by the hacker. In general, phishing efforts are focused on collecting personal data about users. In whaling, the targets are high-ranking bankers, executives or others in powerful positions or job titles. Hackers who engage in whaling often describe these efforts as "reeling in a big fish," applying a familiar metaphor to the process of scouring technologies for loopholes and opportunities for data theft. Those who are engaged in whaling may, for example, hack into specific networks where these powerful individuals work or store sensitive data. They may also set up keylogging or other malware on a work station associated with one of these executives. There are many ways that hackers can pursue whaling, leading C-level or top-level executives in business and government to stay vigilant about the possibility of cyber threats.

C: Vishing is the act of using the telephone in an attempt to scam the user into surrendering private information that will be used for identity theft. The scammer usually pretends to be a legitimate business, and fools the victim into thinking he or she will profit.

D: SPIM is a term sometimes used to refer to spam over IM (Instant Messaging). It's also called just spam, instant spam, or IM marketing. No matter what the name, it consists of unwanted messages transmitted through some form of instant messaging service, which can include Short Message Service (SMS) E: Social engineering is a non-technical method of intrusion hackers use that relies heavily on human interaction

and often involves tricking people into breaking normal security procedures. It is one of the greatest threats that organizations today encounter. A social engineer runs what used to be called a "con game." For example, a person using social engineering to break into a computer network might try to gain the confidence of an authorized user and get them to reveal information that compromises the network's security.

Social engineers often rely on the natural helpfulness of people as well as on their weaknesses. They might, for example, call the authorized employee with some kind of urgent problem that requires immediate network access. Appealing to vanity, appealing to authority, appealing to greed, and old-fashioned eavesdropping are other typical social engineering techniques.
