Free C\_ARSOR\_2108 exam demo is also available for download, You only need little time and energy to review and prepare for the exam if you use our C\_ARSOR\_2108 prep torrent as the studying materials.

#### **NEW QUESTION: 1**

A customer has the following requirements for a new storage solution for the company's 4node HPE ProLiant DL380 Gen9 SQL Cluster:

- fully redundant SAS connectivity
- dual controller architecture
- mixed drive support
- 4 ports per controller
- SSD drive support

Which storage solution meets the customer requirements?

cost-effective way to resolve this problem?

- A. Decrease the threshold CPU utilization percentage at which to deploy a new instance
- B. Decrease the collection period to ten minutes
- C. Decrease the consecutive number of collection periods
- D. Increase the minimum number of instances in the Auto Scaling group

**Answer: D**

Explanation:

If you increase the minimum number of instances, then they will be running even though the load is not high on the website. Hence you are incurring cost even though there is no need.

All of the remaining options are possible options which can be used to increase the number of instances on a high load.

For more information on On-demand scaling, please refer to the below link:

<http://docs.aws.amazon.com/autoscaling/latest/userguide/as-scale-based-on-demand.html>

Note: The tricky part where the question is asking for 'least cost effective way'. You got the design consideration correctly but need to be careful on how the question is phrased.
