#### **NEW QUESTION: 1**

You have a server named Server1 that runs a Server Core Installation of Windows Server 2012.

You attach a 4-TB disk to Server1. The disk is configured as an MBR disk.

You need to ensure that you can create a 4-TB volume on the disk.

Which Diskpart command should you use?

**A.** Attach

**B.** Automount

- C. Convert
- D. Expand

**Answer: C**

Explanation:

You can use Diskpart to convert a basic disk to a dynamic disk. The basic disk can either be empty or contain either primary partitions or logical drives. The basic disk can be a data disk or system or boot drive.

A MBR file structure is only capable of 2TB maximum. The disk will have to be converted to a GPT file structure. GPT is capable of 18 exabytes volumes. Convert gpt - Converts an empty basic disk with the master boot record (MBR) partition style into a basic disk with the GUID partition table (GPT) partition style.

The disk may be a basic or a dynamic disk but it must not contain any valid data partitions or volumes.
