Maybe you are still worrying about how to prepare for the exam, but **Valid C\_SM100\_7210 Vce Dumps** now we will help you gain confidence, In order to help candidates get out of the dilemma, we are here to provide the shortcut for you.

**NEW QUESTION: 1**

Which of the following shows giving permissions to the group owners for read and execute, giving file owner permission for read, write, and execute, and giving all others permissions for execute?

- A. -rx-rwx-x
- B. -rwx-rx-x
- C. -rx-x-rwx
- D. -rwx-rwx-x

**Answer: B**

**NEW QUESTION: 2**

The DR module allows an integration with Enterprise Backup software

- A. FALSE
- B. TRUE

**Answer: A**

**NEW QUESTION: 3**

Which of the following is an objective of the Preliminary Phase?

- A. Operate the governance framework
- B. Draft the Implementation and Migration Plan
- C. Ensure conformance requirements for the target architecture are defined
- D. Establish the Organizational Model for enterprise architecture
- E. Develop the Architecture Vision document

**Answer: D**

**NEW QUESTION: 4**

Which command simplifies the task of converting an SSL VPN to an IKEv2 VPN on a Cisco

ASA appliance that has an invalid IKEv2 configuration?

- A. migrate remote-access ssl
- B. migrate remote-access ssl overwrite
- C. migrate l2l
- D. migrate remote-access ikev2

**Answer: B**

Explanation:

Below is a reference for this question:

<http://www.cisco.com/c/en/us/support/docs/security/asa-5500-x-series-next-generation-firewalls/113597-ptn-113597.html>

If your IKEv1, or even SSL, configuration already exists, the ASA makes the migration process simple. On the command line, enter the migrate command:

```
migrate {l2l | remote-access {ikev2 | ssl} | overwrite}
```

Things of note:

Keyword definitions:

l2l - This converts current IKEv1 l2l tunnels to IKEv2.

remote access - This converts the remote access configuration. You can convert either the

IKEv1 or the SSL tunnel groups to IKEv2.

overwrite - If you have a IKEv2 configuration that you wish to overwrite, then this keyword converts the current IKEv1 configuration and removes the superfluous IKEv2 configuration.
