A. You should coach Van that easiest items for the Development

Team to complete are u at the top.

B. You should coach Van that riskiest items are at the bottom.

C. You should coach Van that the higher cost user stories at the top of the Product Backlog.

D. You should coach Van that the higher priority user stories at the top of the Product Backlog.

Answer: D

NEW QUESTION: 2

Examine the structure of the EMPLOYEES and DEPARTMENTS tables:

Evaluate this SQL statement:

```
SELECT employee_id, e.department_id, department_name,  
Salary
```

```
FROM employees e, departments d
```

```
WHERE e.department_id = d.department_id;
```

Which SQL statement is equivalent to the above SQL statement?

A. SELECT employee_id, d.department_id, department_name,
Salary

```
FROM employees e
```

```
JOIN departments d
```

```
ON e.department_id = d.department_id;
```

B. SELECT employee_id, department_id, department_name,
Salary

```
FROM employees
```

```
JOIN departments
```

```
USING (e.department_id, d.department_id);
```

C. SELECT employee_id, department_id, department_name,
Salary

```
FROM employees
```

```
NATURAL JOIN departments;
```

D. SELECT employee_id, department_id, department_name, Salary
FROM employees WHERE department_id IN (SELECT department_id
FROM departments);

Answer: A

Explanation:

This query shows correct JOIN ON clause syntax and provides

equivalent to the above SQL statement.

Incorrect Answers

A: This statement will show data only for the EMPLOYEES table with records that have department ID from DEPARTMENTS table, not join result of two tables.

B: NATURAL join selects rows from the tables that have equal values in all matched columns (same column names). If the

columns having the same names have different datatypes, an error is returned.

D: There is incorrect usage of JOIN clause with USING keyword.

NEW QUESTION: 3

A company has a set of EC2 instances hosted in AWS. These instances have EBS volumes for storing critical information. There is a business continuity requirement and in order to boost the agility of the business and to ensure data durability which of the following options are not required.

Please select:

- A. Use EBS Snapshots
- B. Use lifecycle policies for the EBS volumes
- C. Use EBS volume encryption
- D. Use EBS volume replication

Answer: C,D

Explanation:

Explanation

Data stored in Amazon EBS volumes is redundantly stored in multiple physical locations as part of normal operation of those services and at no additional charge. However, Amazon EBS replication is stored within the same availability zone, not across multiple zones; therefore, it is highly recommended that you conduct regular snapshots to Amazon S3 for long-term data durability.

You can use Amazon Data Lifecycle Manager (Amazon DLM) to automate the creation, retention, and deletion of snapshots taken to back up your Amazon EBS volumes.

With lifecycle management, you can be sure that snapshots are cleaned up regularly and keep costs under control.

EBS Lifecycle Policies

A lifecycle policy consists of these core settings:

* Resource type-The AWS resource managed by the policy, in this case, EBS volumes.

* Target tag-The tag that must be associated with an EBS volume for it to be managed by the policy.

* Schedule-Defines how often to create snapshots and the maximum number of snapshots to keep. Snapshot creation starts within an hour of the specified start time. If creating a new snapshot exceeds the maximum number of snapshots to keep for the volume, the oldest snapshot is deleted.

Option C is correct. Each Amazon EBS volume is automatically replicated within its Availability Zone to protect you from component failure, offering high availability and durability. But it does not have an explicit feature like that.

Option D is correct Encryption does not ensure data durability For information on security for Compute Resources, please visit the below URL

<https://d1.awsstatic.com/whitepapers/Security/Security Compute Services Whitepaper.pdf> The correct answers are: Use EBS volume replication. Use EBS volume encryption Submit your Feedback/Queries to our Experts

NEW QUESTION: 4

How are availability zones distributed?

- A. Round-robin
- B. Alphabetical by cluster name
- C. Highest amount of RAM available
- D. Highest amount of CPU available

Answer: A
