NEW QUESTION: 1

You are developing a data flow transformation to merge two data sources. One source contains product data and the other source contains data about the country in which the product was manufactured. Both data sources contain a two-character CountryCode column and both use SQL Server. Both data sources contain an ORDER BY clause to sort the data by the CountryCode column in ascending order.

You use a Merge Join transformation to join the data.

You need to ensure that the Merge Join transformation works correctly without additional transformations.

What should you do? (Each correct answer presents part of the solution. Choose all that apply.)

- A.** Set the appropriate SortKeyPosition properties on the data sources.
- B.** Change the Merge Join transformation to a Merge transformation.
- C.** Change the ORDER BY clause on the product source to order by ProductName.
- D.** Set the IsSorted property on both data sources.

Answer: A,D

NEW QUESTION: 2

What is the first step you perform to secure an ADF application? (Choose the best answer.)

- A. Merge the application roles into the deployment server's roles.
- B. Use the Configure ADF Security wizard to enable security for the application.
- C. Edit the web.xml file and adf-config.xml file to include the ADF authentication servlet configuration.
- D. Create a login page and run the application authenticated as the test-all user.
- E. Define a lifecycle listener to intercept the HTTP request for the application's URL.

Answer: B

Explanation:

Explanation/Reference:

To simplify the configuration process which allows ADF Security to integrate with OPSS, JDeveloper provides the Configure ADF Security wizard. The wizard is the starting point for securing the Fusion web application using ADF Security. The wizard is an application-level tool that, once run, will enable ADF Security for all user interface projects that your application contains.
