Answer:

Explanation:

Explanation:

Box 1: forecasting

Task: The type of task to run. Values can be 'classification', 'regression', or 'forecasting' depending on the type of automated ML problem to solve.

Box 2: temperature

The training data to be used within the experiment. It should contain both training features and a label column (optionally a sample weights column).

Box 3: observation_time

time_column_name: The name of the time column. This parameter is required when forecasting to specify the datetime column in the input data used for building the time series and inferring its frequency. This setting is being deprecated. Please use forecasting_parameters instead.

Box 4: 7

"predicts temperature over the next seven days"

max_horizon: The desired maximum forecast horizon in units of time-series frequency. The default value is 1.

Units are based on the time interval of your training data, e.g., monthly, weekly that the forecaster should predict out. When task type is forecasting, this parameter is required.

Box 5: 50

"For the initial round of training, you want to train a maximum of 50 different models." Iterations: The total number of different algorithm and parameter combinations to test during an automated ML experiment.

Reference:

<https://docs.microsoft.com/en-us/python/api/azureml-train-automl-client/azureml.train.automl.automlconfig.automlconfig>

NEW QUESTION: 3

You have recently configured an IPsec tunnel between two SRX Series devices. One of the devices is assigned an IP address using DHCP with an IP address that changes frequently. Initial testing indicates that the IPsec tunnel is not working. Troubleshooting has revealed that Phase 1 negotiations are failing.

Which two actions would solve the problem? (Choose two.)

- A. Verify that VPN monitoring is enabled.
- B. Verify that the device with the IP address assigned by DHCP is the traffic initiator.
- C. Verify that PKI is properly configured.
- D. Verify that the IKE policy is configured for aggressive mode.

Answer: B,D

NEW QUESTION: 4

A Developer executed a AWS CLI command and received the error shown below:

What action should the Developer perform to make this error human-readable?

- A. Use the AWS STS decode-authorization-message API to decode the message.
- B. Use an open source decoding library to decode the message.
- C. Make a call to AWS KMS to decode the message.
- D. Use the AWS IAM decode-authorization-message API to decode this message.

Answer: A

Explanation:

Explanation

<https://docs.aws.amazon.com/cli/latest/reference/sts/decode-authorization-message.html> The message is encoded because the details of the authorization status can constitute privileged information that the user who requested the operation should not see. To decode an authorization status message, a user must be granted permissions via an IAM policy to request the DecodeAuthorizationMessage (sts:DecodeAuthorizationMessage) action.
